**The Structure of Economics** Eugene Silberberg,Wing Chuen Suen,2001 This text combines mathematical economics with microeconomic theory and can be required or recommended as part of a course in graduate microeconomic theory advanced undergraduate or graduate level mathematical economics or any advanced topics course It also has reference value for international library professional and reference markets This revision addresses significant new topics the theory of contracts and markets with imperfect information that have recently become prominent in the microeconomics literature

**The Geometry of Efficient Fair Division** Julius B. Barbanel,2005-01-24 What is the best way to divide a cake and allocate the pieces among some finite collection of players In this book the cake is a measure space and each player uses a countably additive non atomic probability measure to evaluate the size of the pieces of cake with different players generally using different measures The author investigates efficiency properties is there another partition that would make everyone at least as happy and would make at least one player happier than the present partition and fairness properties do all players think that their piece is at least as large as every other player's piece He focuses exclusively on abstract existence results rather than algorithms and on the geometric objects that arise naturally in this context By examining the shape of these objects and the relationship between them he demonstrates results concerning the existence of efficient and fair partitions
