*The Technological Singularity* Murray Shanahan, 2015-08-07 The idea of technological singularity and what it would mean if ordinary human intelligence were enhanced or overtaken by artificial intelligence The idea that human history is approaching a singularity that ordinary humans will someday be overtaken by artificially intelligent machines or cognitively enhanced biological intelligence or both has moved from the realm of science fiction to serious debate Some singularity theorists predict that if the field of artificial intelligence AI continues to develop at its current dizzying rate the singularity could come about in the middle of the present century Murray Shanahan offers an introduction to the idea of the singularity and considers the ramifications of such a potentially seismic event Shanahan's aim is not to make predictions but rather to investigate a range of scenarios Whether we believe that singularity is near or far likely or impossible apocalypse or utopia the very idea raises crucial philosophical and pragmatic questions forcing us to think seriously about what we want as a species Shanahan describes technological advances in AI both biologically inspired and engineered from scratch Once human level AI theoretically possible but difficult to accomplish has been achieved he explains the transition to superintelligent AI could be very rapid Shanahan considers what the existence of superintelligent machines could mean for such matters as personhood responsibility rights and identity Some superhuman AI agents might be created to benefit humankind some might go rogue Is Siri the template or HAL The singularity presents both an existential threat to humanity and an existential opportunity for humanity to transcend its limitations Shanahan makes it clear that we need to imagine both possibilities if we want to bring about the better outcome

**Braving the Future** Douglas Estes, 2018-11-06 Humanity is nearing a technological tipping point. The blistering pace of technological, scientific and social change is ushering in an era in which human bodies merge with devices, corporations know everything about us and artificial intelligence develops human and even godlike potential. In possession of the most powerful tools history has ever seen, we will be faced with questions about wisdom, authority, faith, desire and what it means to be human. In *Braving the Future*, Douglas Estes equips Christians to thoughtfully and prayerfully prepare for a future of technological reign that is rapidly expanding. Drawing on Scripture, Christian tradition and scientific literature, Estes offers a theology of work, creation and personhood that is both prophetic and sturdy enough to keep pace with the technology of a future as yet unknown. He helps readers choose trust in God over fearful retreat and following Jesus over uncritical engagement with technology. The future may not look exactly like a science fiction movie, but are we ready to brave a future of limitless tech and boundless change?

**What the Future Looks Like** Jim Al-Khalili, 2018-04-17 Science fact, not science fiction, on the cutting edge: developments that are already changing the course of our future. Every day, scientists conduct pioneering experiments with the potential to transform how we live. Yet it isn't every day you hear from the scientists themselves. Now, award-winning author Jim Al Khalili and his team of top-notch experts explain how today's earthshaking discoveries will shape our world tomorrow and beyond. Pull back the curtain on genomics, robotics, AI, the Internet of Things, synthetic biology, transhumanism, interstellar travel, colonization of the solar system, teleportation and much more. And find insight into big-picture questions such as: Will we find a cure to all diseases? The answer to climate change? And will bionics one day turn us into superheroes? The scientists in these pages are interested only in the truth, reality based and speculation-free. The future they conjure is by turns tantalizing and sobering. There's plenty to look forward to, but also plenty to dread. And undoubtedly the best way to for us to face tomorrow's greatest challenges is to learn what the future looks like today.

Science Fiction Sherryl Vint,2021-02-16 How science fiction has been a tool for understanding and living through rapid technological change The world today seems to be slipping into a science fiction future We have phones that speak to us cars that drive themselves and connected devices that communicate with each other in languages we don t understand Depending the news of the day we inhabit either a technological utopia or Brave New World nightmare This volume in the MIT Press Essential Knowledge surveys the uses of science fiction It focuses on what is at the core of all definitions of science fiction a vision of the world made otherwise and what possibilities might flow from such otherness The Philosopher's Index ,2008 Vols for 1969 include a section of abstracts Books in Series ,1979 Technology in America ,1982 **Men, Machines, and Modern Times, 50th Anniversary Edition** Elting E. Morison,2016-08-26 An engaging look at how we have learned to live with innovation and new technologies through history People have had trouble adapting to new technology ever since perhaps the inventor of the wheel had to explain that a wheelbarrow could carry more than a person This little book by a celebrated MIT professor the fiftieth anniversary edition of a classic describes how we learn to live and work with innovation Elting Morison considers among other things the three stages of users resistance to change ignoring it rational rebuttal and name calling He recounts the illustrative anecdote of the World War II artillerymen who stood still to hold the horses despite the fact that the guns were now hitched to trucks reassuring those of us who have trouble with a new interface or a software upgrade that we are not the first to encounter such problems Morison offers an entertaining series of historical accounts to highlight his major theme the nature of technological change and society s reaction to that change He begins with resistance to innovation in the U S Navy following an officer s discovery of a more accurate way to fire a gun at sea continues with thoughts about bureaucracy paperwork and card files touches on rumble seats the ghost in Hamlet and computers tells the strange history of a new model steamship in the 1860s and describes the development of the Bessemer steel process Each instance teaches a lesson about the more profound and current problem of how to organize and manage systems of ideas energies and machinery so that it will conform to the human dimension **Technology Matters** David E. Nye,2007-08-24

Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters Technology matters writes David Nye because it is inseparable from being human We have used tools for more than 100 000 years and their central purpose has not always been to provide necessities People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks Perhaps this is because we are intimate with devices and machines from an early age as children we play with technological toys trucks cars stoves telephones model railroads Playstations Through these machines we imagine ourselves into a creative relationship with the world As adults we retain this technological playfulness with gadgets and appliances Blackberries cell phones GPS navigation systems in our

cars We use technology to shape our world yet we think little about the choices we are making In Technology Matters Nye tackles ten central questions about our relationship to technology integrating a half century of ideas about technology into ten cogent and concise chapters with wide ranging historical examples from many societies He asks Can we define technology Does technology shape us or do we shape it Is technology inevitable or unpredictable Why do experts often fail to get it right How do historians understand it Are we using modern technology to create cultural uniformity or diversity To create abundance or an ecological crisis To destroy jobs or create new opportunities Should the market choose our technologies Do advanced technologies make us more secure or escalate dangers Does ubiquitous technology expand our mental horizons or encapsulate us in artifice These large questions may have no final answers yet but we need to wrestle with them to live them so that we may as Rilke puts it live along some distant day into the answers     **Does Technology**

**Drive History?** Merritt Roe Smith,Leo Marx,1994-06-02 These thirteen essays explore a crucial historical question that has been notoriously hard to pin down To what extent and by what means does a society s technology determine its political social economic and cultural forms These thirteen essays explore a crucial historical question that has been notoriously hard to pin down To what extent and by what means does a society s technology determine its political social economic and cultural forms Karl Marx launched the modern debate on determinism with his provocative remark that the hand mill gives you society with the feudal lord the steam mill society with the industrial capitalist and a classic article by Robert Heilbroner reprinted here renewed the debate within the context of the history of technology This book clarifies the debate and carries it forward Marx s position has become embedded in our culture in the form of constant reminders as to how our fast changing technologies will alter our lives Yet historians who have looked closely at where technologies really come from generally support the proposition that technologies are not autonomous but are social products susceptible to democratic controls The issue is crucial for democratic theory These essays tackle it head on offering a deep look at all the shadings of determinism and assessing determinist models in a wide variety of historical contexts Contributors Bruce Bimber Richard W Bulliet Robert L Heilbroner Thomas P Hughes Leo Marx Thomas J Misa Peter C Perdue Philip Scranton Merritt Roe Smith Michael L Smith John M Staudenmaier Rosalind Williams

**American Technological Sublime** David E. Nye,1996-02-28 American Technological Sublime continues the exploration of the social construction of technology that David Nye began in his award winning book Electrifying America Here Nye examines the continuing appeal of the technological sublime a term coined by Perry Miller as a key to the nation s history using as examples the natural sites architectural forms and technological achievements that ordinary people have valued intensely Technology has long played a central role in the formation of Americans sense of selfhood From the first canal systems through the moon landing Americans have for better or worse derived unity from the common feeling of awe inspired by large scale applications of technological prowess American Technological Sublime continues the exploration of the social construction of technology that David Nye began in his award

winning book Electrifying America Here Nye examines the continuing appeal of the technological sublime a term coined by Perry Miller as a key to the nation's history using as examples the natural sites architectural forms and technological achievements that ordinary people have valued intensely American Technological Sublime is a study of the politics of perception in industrial society Arranged chronologically it suggests that the sublime itself has a history that sublime experiences are emotional configurations that emerge from new social and technological conditions and that each new configuration to some extent undermines and displaces the older versions After giving a short history of the sublime as an aesthetic category Nye describes the reemergence and democratization of the concept in the early nineteenth century as an expression of the American sense of specialness What has filled the American public with wonder awe even terror David Nye selects the Grand Canyon Niagara Falls the eruption of Mt St Helens the Erie Canal the first transcontinental railroad Eads Bridge Brooklyn Bridge the major international expositions the Hudson Fulton Celebration of 1909 the Empire State Building and Boulder Dam He then looks at the atom bomb tests and the Apollo mission as examples of the increasing ambivalence of the technological sublime in the postwar world The festivities surrounding the rededication of the Statue of Liberty in 1986 become a touchstone reflecting the transformation of the American experience of the sublime over two centuries Nye concludes with a vision of the modern day consumer sublime as manifested in the fantasy world of Las Vegas
