Social Behavior Network Theory:

Interregional and International Trade Bernard C. Beaudreau, 2008-06-01 Provides a network approach to understanding trade and trade policy from Antiquity to the present Argues that trade has occurred is occurring and will continue to occur within well defined stable networks e.g. empires, multinational firms, free trade areas. Is able to rationalize the many puzzles that currently plague international economics. Results can be generalized to all trade activity ranging from economic to social to political.

World Trade Bernard C. Beaudreau, 2004-08 In this timely work Bernard C. Beaudreau provides a new approach to world trade one that combines the archaeological and historical record with recent developments in the theory of networks the result of which is a convincing account of trading patterns past present and undoubtedly into the future. For the first time trade theory is no longer at odds with the historical record. Likewise for the first time trade policy is no longer at odds with the historical record. In short this book is the first work of its kind to attempt to integrate over 8 000 years of large scale international trade.

The world according to zebrafish: How neural circuits generate behaviour Gonzalo G. De Polavieja, German Sumbre, 2014-11-07

Understanding how the brain functions is one of the most ambitious current scientific goals. This challenge will only be accomplished by a multidisciplinary approach involving genetics, molecular biology, optics, ethology, neurobiology, and mathematics, and using tractable model systems. The zebrafish larva is a transparent, genetically tractable, small vertebrate, ideal for the combination of state-of-the-art imaging techniques, e.g., two-photon scanning microscopy, single-plane illumination microscopy, spatial light modulator microscopy, and lightfield microscopy. Bioluminescence and optogenetics to monitor and manipulate neuronal activity from single specific neurons up to the entire brain in an intact behaving organism. Furthermore, the zebrafish model offers a large and increasing collection of mutant and transgenic lines modelling human brain diseases. With these advantages in hand, the zebrafish larva became in the recent years a novel animal model to study neuronal circuits and behaviour, taking us closer than ever before to understand how the brain controls behaviour.
