**Nutrition and Cardiovascular Health** Paramjit S. Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental epidemiological and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease CVD While nutritionally poor diets can have a significant negative impact on cardiovascular health dietary interventions with specific nutrients and or functional foods are considered cost effective and efficient components of

prevention strategies It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD Indeed in one of the seminal studies conducted on modifiable risk factors and heart health the INTERHEART study 90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD There is an increasing public interest in and scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease as well as their mechanisms of therapeutic and preventive action

**Tuberculosis Vaccines** Paulo J.G. Bettencourt, 2025-08-30 Tuberculosis TB is the leading cause of death by an infectious agent worldwide The Bacillus Calmette Gu rin BCG is the only licensed vaccine against TB and the most widely used vaccine in history Since 1921 billions of people have been vaccinated with BCG resulting in a remarkable decline in infant mortality However although BCG s efficacy to prevent TB meningitis and disseminated disease in children is well established its efficacy to prevent infection disease or reactivation in adolescents and adults is variable Therefore novel TB vaccines are urgently needed Recent clinical trials have shown promising results offering hope for the introduction of a new generation of vaccines to replace or boost BCG The book is structured into five sections each providing sequential relevance to understanding the current landscape and future developments in TB vaccines Section 1 introduces TB and the causative agent Mycobacterium tuberculosis Section 2 presents historical perspectives on BCG and TB vaccine candidates Section 3 focuses on pre clinical vaccines against TB Section 4 examines vaccines against TB currently in clinical trials Finally section 5 discusses public health and societal challenges associated with the development of TB vaccines This book is an essential tool for students clinicians and scientists working in the fields of mycobacteriology vaccine immunology vaccine development and TB vaccines and it is anticipated to stimulate future research in TB vaccine development

**Immunopathogenesis and Immune-based Therapy for Selected Autoimmune Disorders** Mourad Aribi, 2017-03-22 The book Immunopathogenesis and Immune Based Therapy for Selected Autoimmune Disorders is a synthesis work that discusses two main aspects of autoimmunity Immunopathogenesis and therapeutic approaches essentially based on the immunotherapies This book deals with different topics on a number of autoimmune disorders including type 1 diabetes autoimmune cardiomyopathy autoimmunity of gastrointestinal tract systemic sclerosis and myasthenia gravis This book will be useful to clinicians biologists researchers teachers and students who are interested in immunology and immunopathology

*Primary Immunodeficiencies Worldwide* Menno C. van Zelm, Antonio Condino-Neto, Mohamed-Ridha Barbouche, 2020-02-19 [Immune Disorders in Diabetes and Microvascular Complications](#) Yuanzeng Min, Minglin Ma, Jialin Gao, Hongyu Kuang, 2023-11-22 At present the prevalence of adult diabetes is 8 10% and the number of diabetic patients in the world is conservatively estimated to be 350 million Diabetic nephropathy and diabetic retinopathy are the two major microvascular complications of diabetic patients and their lethality and harm on the whole exceed the other two

complications diabetic foot disease and other complications Among them the prevalence of diabetic nephropathy is as high as 20-50% in the diabetic population especially in patients with diabetes for more than 10 years the prevalence rate can be as high as 70% and half of them will develop chronic renal damage and renal failure Diabetic nephropathy is the first cause of renal maintenance dialysis in end stage renal disease in Europe and the United States Diabetic retinopathy is also the leading cause of blindness in diabetic patients Immune factors have been clearly confirmed to play an important pathogenic role in type 1 diabetes but the role of immune factors in the pathogenesis of type 2 diabetes remains to be further explored In addition we are not clear about the role of immune involved inflammatory response plays in diabetic microvascular disease and do not know whether it can be a potential intervention target Answering these questions will provide important targets to overcome diabetes and effectively prevent the progress of diabetic microvascular complications The goal of the Research Topic is to explore the immune inflammation regulation and mediating mechanisms during the pathogenesis of diabetes and diabetic microvascular complications diabetic nephropathy diabetic retinopathy and to find potential disease intervention targets in related treatments We welcome manuscripts that include but are not limited to the following aspects Immune Mediated Mechanisms of the Development of Diabetes The role of immune mediated pancreatic cell function decline in the development of type 2 diabetes mellitus Potential immunotherapy prospects for diabetes Involvement and mechanism of immune inflammation in the pathogenesis of diabetic nephropathy Immune pathogenic mechanisms in the development of diabetic retinopathy

**Immunology at a Glance** J. H. L. Playfair, B. M. Chain, 2012-09-11 Immunology at a Glance provides a user friendly overview of the body's defence mechanisms Ideal from day one of a medical biomedical or life science course the text begins with a basic overview of both adaptive and innate immunity before progressing to applied immunological concepts which look at what happens when things go wrong and how in clinical medicine each body system can be affected by immunity Each double page spread corresponds to a typical lecture and diagrammatically summarises core concepts in immunology through accessible schematic diagrams on left hand pages with key points concisely summarised on the right hand page There are also self assessment essay questions so you can test your knowledge New for this 10th edition Thoroughly updated and reorganised chapters offer greater clarity and easier understanding for those new to the subject New chapters on cytokine receptors and Immunology in the Laboratory A completely re written section on autoimmunity A brand new companion website featuring self assessment questions and PowerPoint slides of images from the book ideal for teaching and revision at [www.ataglanceseries.com/immunology](http://www.ataglanceseries.com/immunology) Immunology at a Glance is the ideal companion for anyone about to start a new course in immunology and will appeal to medical and biomedical science students Perfect for exam preparation it provides the concepts and frameworks you need to succeed in your exam

**The Roles of the TNF-Family Member B-Cell Activation Factor Belonging to the TNF-Family (BAFF) in Autoimmunity** Kouichi Hirayama,2017 The tumor necrosis factor superfamily TNFSF member and cytokine known as B cell activation factor belonging to the TNF family BAFF has been identified as one of the key factors in the selection and survival of B cells Overexpression of BAFF in mice leads to autoimmunity whereas BAFF deficient mice lack mature B cells Although under normal concentrations of BAFF non self reactive B cells survived and autoreactive B cells were deleted a higher concentration of BAFF contributed to the survival of autoreactive B cells and elevated autoantibody production Lupus prone mice have increased serum levels of BAFF during the onset and progression of disease The serum BAFF levels are elevated in patients with autoimmune diseases such as systemic lupus erythematosus rheumatoid arthritis Sj gren s syndrome and ANCA associated vasculitis and showed positive correlations with autoantibodies Based on the development of autoimmune disorders in animal models of BAFF overexpression and the elevated levels of serum BAFF in patients with autoimmune diseases it appears that BAFF may be associated with autoimmune processes and that BAFF may be a potential biomarker for disease activity in autoimmune diseases BAFF may also be important as a therapeutic target in those diseases and several BAFF neutralizing agents are currently undergoing clinical trials
