Wave Actions

Ch. 12-2

Damping

No motion can last for ever. A pendulum will eventually stop swinging due to air friction. A wave will eventually lose its energy as well. Friction or the restoring force eventually cause the motion to lose its energy and to die out. This gradual reduction of amplitude we call **damping**.

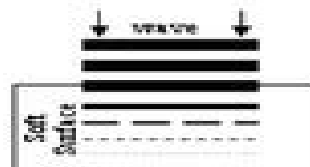

This graph shows the damping of harmonic motion over time until it has stopped (returned to its equilibrium position).

Boundary Reactions

There are four ways a wave can react depending on the boundary it encounters: **Absorption, Reflection, Refraction, Diffraction.**

Soft Boundaries Absorb

Absorption—a wave's energy dies out in a soft material (damping). *Example: Telling into a pillow. The soft pillow absorbs the sound.*

Absorption

Hard Boundaries Reflect

Reflection—a wave bounces off when it hits a hard boundary. *Example: When you yell against a wall, the sound wave reflects off of the wall.*

Reflection

We call sound that is reflected back to us **echoes**. Many animals use **echolocation** to see through dark caves or at night! An animal makes a noise and uses the echo to figure out where an object or prey is located.

Bats use echolocation, too, in **sonar** (submarines using sound waves), **radar** (airports using light waves), and **sonograms** (sound waves to see inside soft parts of the human body).

Corners Diffract

Diffraction—part of a wave bends around a corner. This is partially how we hear around corners and how some light can be seen around corners. What happens is the corner drags the wave slowing it down and turning it. *Example: talking to someone around a corner.*

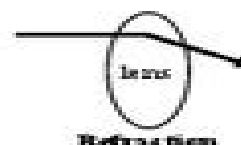

Diffraction on

Light diffracts. PROVE IT: Put your hand up to your eye. Look between two of your fingers. As you close your fingers together you see "lines" — almost like your skin is "jumping the gap." These dark lines are where two diffracted light waves are canceling each other out to produce **darkness**. How do they cancel each other out? By **destructive interference**. see back page.

Transparent Boundaries Refract

Refraction—a wave bends when entering a transparent boundary. *Example: Light going into water bends toward the water. Light also bends going through the lenses of eyeglasses to magnify objects.*

Refraction

Natural Frequency

All objects have a **natural frequency**—the frequency that they vibrate at when disturbed. Musical instruments easily show natural frequencies, but most other objects have them, too: bridges, buildings, etc.

Resonance

Resonance is the reinforcing of an object's natural frequency so that the amplitude increases quickly. Harmonics show resonance. If you have ever been talking in a bathroom and notice that certain notes are very loud—that's resonance: that loud note is the natural frequency of that room. Resonance is how a soprano can break a glass with her voice.

Phase

Phase—a particular part of a cycle.

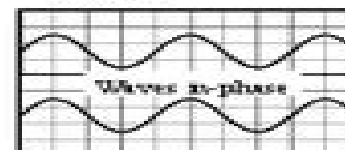

In-phase

In-phase means they are at the same point in their cycles.

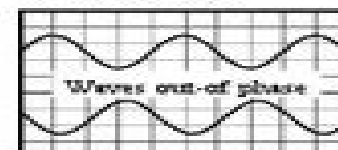

Out-of-phase means they are at different points in their cycles.

International Energy Investment Law Peter D. Cameron,2010 Long term contracts have been used in the international petroleum industry since its earliest days However they have been prone to unilateral revision by host governments in countries where the petroleum reserves are located In the 1970s a wave of nationalisations and contract renegotiations led to a number of much cited arbitral awards and significant changes in contracting practice in the international petroleum industry Recently it has become clear that a new wave of unilateral state action is taking place in the international petroleum industry most evidently in Latin America and Russia These developments increase the tempo of a long term process in which the exposure of largely privately owned Western energy companies to unilateral state action has been increasing The book asks how have legal processes and instruments developed to mitigate that growing exposure and why have they had so little success This monograph examines and assesses the variety of legal instruments from international and commercial law that have been designed to promote stability in long term contracts in the international energy industry including dedicated contract provisions bilateral investment treaties and multilateral treaty instruments It

covers both energy production and networks involving large scale fixed infrastructure It pays particular attention to their practical impact through an analysis of their enforcement by arbitration tribunals and bodies such as the ICSID the ICC and the LCIA The book also examines the growing challenges presented by environmental and social risk to the stability of long term agreements The book s approach is both analytical and historical locating legal instruments and enforcement awards in their context discussing their origins and purpose 1921 Annotations to Corpus Juris ,1915 **“A” New English Dictionary on Historical Principles** James Augustus Henry Murray,1926 **The Times Law Reports** ,1907
