Vaccine Mark A. Largent, 2012-09-01 A thoughtful evaluation of the vaccine debate its history and its consequences Since 1990 the number of mandated vaccines has increased dramatically Today a fully vaccinated child will have received nearly three dozen vaccinations between birth

and age six Along with the increase in number has come a growing wave of concern among parents about the unintended side effects of vaccines In Vaccine Mark A Largent explains the history of the debate and identifies issues that parents pediatricians politicians and public health officials must address Nearly 40% of American parents report that they delay or refuse a recommended vaccine for their children Despite assurances from every mainstream scientific and medical institution parents continue to be haunted by the question of whether vaccines cause autism In response health officials herald vaccines as both safe and vital to the public s health and put programs and regulations in place to encourage parents to follow the recommended vaccine schedule For Largent the vaccine autism debate obscures a constellation of concerns held by many parents including anxiety about the number of vaccines required including some for diseases that children are unlikely ever to encounter unhappiness about the rigorous schedule of vaccines during well baby visits and fear of potential side effects some of them serious and even life threatening This book disentangles competing claims opens the controversy for critical reflection and provides recommendations for moving forward

Vaccine Arthur Allen, 2007 In this account of vaccination s miraculous inflammatory past and its uncertain future journalist Arthur Allen reveals a history both illuminated with hope and shrouded by controversy from Edward Jenner s discovery of smallpox vaccine in 1796 to Pasteur s vaccines for rabies and cholera to those that safeguarded the children of the twentieth century and finally to the tumult currently surrounding vaccination Faced with threats from anthrax to AIDS we are a vulnerable population and can no longer depend on vaccines numerous studies have linked childhood vaccination with various neurological disorders and our pharmaceutical companies are more attracted to the profits of treatment than to the prevention of disease From publisher description From source other than the Library of Congress

Vaccines Sylvia Engdahl, 2009 This anthology provides your readers with a complete overview of the vaccination debate It contains a diverse collection of writings representing leading views of the issues surrounding the topic such as whether vaccines should be mandatory whether they re dangerous and if anti vaccine fanatics are free riders Each chapter presents an important question about the subject and the opinions that follow are grouped into yes and no categories By evaluating contrasting opinions readers can attain an objective knowledge of the subject Fact boxes are included to summarize important information for researchers

Immunization Stuart Blume, 2017-08-15 As the world pins its hope for the end of the coronavirus pandemic to the successful rollout of vaccines this book offers a vital long view of such efforts and our resistance to them At a time when vaccines are a vital tool in the fight against COVID 19 in all its various mutations this hard hitting book takes a longer historical perspective It argues that globalization and cuts to healthcare have been eroding faith in the institutions producing and providing vaccines for more than thirty years It tells the history of immunization from the work of early pioneers such as Louis Pasteur and Robert Koch through the eradication of smallpox in 1980 to the recent introduction of new kinds of genetically engineered vaccines Immunization exposes the limits of public health authorities

while suggesting how they can restore our confidence Public health experts and all those considering vaccinations should read this timely history *Vaccine Anxieties* Melissa Leach, James Fairhead, 2007 This book explores how parents understand and engage with childhood vaccination in contrasting global contexts This rapidly advancing and universal technology has sparked dramatic controversy whether over MMR in the UK or oral polio vaccines in Nigeria Combining a fresh anthropological perspective with detailed field research the book examines anxieties emerging as highly globalized vaccine technologies and technocracies encounter the deeply intimate personal and social worlds of parenting and childcare and how these are part of transforming science society relations It retheorizes anxieties about technologies integrating bodily social and wider political dimensions and challenges common views of ignorance risk trust and rumour and related dichotomies between Northern risk society and Southern developing society that dominate current scientific and policy debates In so doing the book reflects critically on the stereotypes that at times pass for explanations of public engagement with both routine vaccination and vaccine research It suggests routes to improved dialogue between health professionals and the people they serve and new ways to address science society relations in a globalized world
