Value Free Science Ideals And Illusion:

Value-Free Science Harold Kincaid, John Dupre, Alison Wylie, 2007-03-15 The contributors to this volume investigate where and how values are involved in science and examine the implications of this involvement for ideals of objectivity

Value-free Science? Harold Kincaid, John Dupré, Alison Wyley, 2009 **Current Controversies in Values and Science** Kevin C. Elliott, Daniel Steel, 2017-03-27 Current Controversies in Values and Science asks ten philosophers to debate five questions two philosophers per debate that are driving contemporary work in this important area of philosophy of science The book is perfect for the advanced student building up her knowledge of the foundations of the field while also engaging its most cutting edge questions Introductions and annotated bibliographies for each debate preliminary descriptions of each chapter study questions and a supplemental guide to further controversies involving values in science help provide clearer and richer snapshots of active controversies for all readers International Handbook of Research in History, Philosophy and Science Teaching Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics It is contributed to by 130 researchers from 30 countries it provides a logically structured fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally The first handbook to cover the field it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face teachers and administrators Science educators will be grateful for this unique encyclopaedic handbook Gerald Holton Physics Department Harvard University This handbook gathers the fruits of over thirty years research by a growing international and cosmopolitan community Fabio Bevilacqua Physics Department University of Pavia *Meta-Philosophical Reflection on Feminist Philosophies of Science* Maria Cristina Amoretti, Nicola Vassallo, 2015-12-21 This volume offers a meta philosophical reflection on feminist philosophies of science It emphasizes and discusses both the connections and differences between traditional philosophies of science and feminist philosophies of science The collection systematically analyses feminist contributions to the various philosophies of specific sciences Each

chapter is devoted to a specific area of philosophy of science general philosophy of science philosophy of biology philosophy of climate sciences philosophy of cognitive sciences and neurosciences philosophy of economics philosophy of history and archaeology philosophy of logic and mathematics philosophy of medicine philosophy of psychology philosophy of physics and philosophy of social sciences Since some of these areas have so far rarely been addressed by feminist philosophers this new collection provides new angles and stimulates the debate on pivotal issues that are part and parcel of both traditional philosophies of science and feminist philosophies of science Using a range of different methodologies and styles the essays all show great clarity in both arguments and contents

The Fight Against Doubt Inmaculada de Melo-Martín, Kristen Intemann, 2018-07-02 The lack of public support for climate change policies and refusals to vaccinate children are just two alarming illustrations of the impacts of dissent about scientific claims Dissent can lead to confusion false beliefs and widespread public doubt about highly justified scientific evidence Even more dangerously it has begun to corrode the very authority of scientific consensus and knowledge Deployed aggressively and to political ends some dissent can intimidate scientists stymie research and lead both the public and policymakers to oppose important public policies firmly rooted in science To criticize dissent is however a fraught exercise Skepticism and fearless debate are key to the scientific process making it both vital and incredibly difficult to characterize and identify dissent that is problematic in its approach and consequences Indeed as de Melo Martín and Intemann show the criteria commonly proposed as means of identifying inappropriate dissent are flawed and the strategies generally recommended to tackle such dissent are not only ineffective but could even make the situation worse *The Fight Against Doubt* proposes that progress on this front can best be achieved by enhancing the trustworthiness of the scientific community and by being more realistic about the limits of science when it comes to policymaking It shows that a richer understanding of the context in which science operates is needed to disarm problematic dissent and those who deploy it This the authors argue is the best way forward rather than diagnosing the many instances of wrong headed dissent

Eppur si muove: Doing History and Philosophy of Science with Peter Machamer Marcus P. Adams, Zvi Biener, Uljana Feest, Jacqueline A. Sullivan, 2017-03-23 This volume is a collection of original essays focusing on a wide range of topics in the History and Philosophy of Science It is a festschrift for Peter Machamer which includes contributions from scholars who at one time or another were his students The essays bring together analyses of issues and debates spanning from early modern science and philosophy through the 21st century Machamer's influence is reflected in the volume's broad range of topics These include underdetermination scientific practice scientific models mechanistic explanation in contemporary and historical science values in science the relationship between philosophy and psychology experimentation supervenience and reductionism

The Philosopher's Index, 2008 Vols for 1969 include a section of abstracts

Philosophical Insights about Modern Science Eva Zerovnik, Olga Markič, Andrej Ule, 2009 Modern science is so much specialised that it seems utopic to try to follow it all at once This new book is aimed at

crossing the gap between specialists and a common understanding of modern science It would seem desirable that all educated people would know something from the humanities literature art but also the newest developments of natural sciences One aim of this book is to point out the main messages of certain scientific fields and what is really new and beyond the average educational level in order to broaden our horizons Therefore at the end of the chapters each scientific field possible future contributions and and ethical concerns if any are elaborated

New Waves in Philosophy of Science P. Magnus,J. Busch,2009-12-18 New Waves in Philosophy of Science captures the diverse array of issues in the rapidly developing area of philosophy of science by bringing together a pool of talented young philosophers from across the globe to debate the field and show where it s heading
