Diagnostic Imaging:

Vascular Interventional Radiology Mark G. Cowling, 2006-12-26 This volume focusses on the current evidence surrounding the use of endovascular therapy. It updates and complements the earlier Medical Radiology volume on the Radiology of Peripheral Vascular Diseases. Some background information is provided on vascular biology and the facilities required for safe endovascular practice along with guidance on consent issues. Further chapters deal with endovascular treatment in particular arterial territories and include the evidence in favour of or against the use of specific treatments. The most up to date evidence surrounding endovascular aneurysm repair is discussed. There are also chapters on venous interventions including the endovascular management of varicose veins. This book will be of value both to interventional radiologists and to vascular surgeons with an interest in endovascular techniques.

MRI of the Lung Hans-Ulrich Kauczor, 2008-11-12 During the past decade significant developments have been achieved in the field of magnetic resonance imaging. MRI enabling MRI to enter the clinical arena of chest imaging. Standard protocols can now be implemented on up to date scanners allowing MRI to be used as a first line imaging modality for various lung diseases including cystic fibrosis, pulmonary hypertension and even lung cancer. The diagnostic benefits stem from the ability of MRI to visualize changes in lung structure while simultaneously imaging different aspects of lung function such as perfusion, respiratory motion, ventilation and gas exchange. On this basis novel quantitative surrogates for lung function can be obtained. This book provides a comprehensive overview of how to use MRI for imaging of lung disease. Special emphasis is placed on benign diseases requiring regular monitoring given that it is patients with these diseases who derive the greatest benefit from the avoidance of ionizing radiation.

Imaging of Bone Tumors and Tumor-Like Lesions A. Mark Davies, Murali Sundaram, Steven J. James, 2009-08-21 Detection and characterization of bone tumors with imaging remains a big challenge for every radiologist notwithstanding the impressive progress achieved by the introduction of several new imaging modalities. Moreover new concepts in surgical and oncological treatment of these lesions require from the radiologist appropriate and focused answers to the specific questions asked by the referring physicians in order to choose the best therapeutic approach for the individual patient. This comprehensive textbook describes in detail the possibilities and limits of all modalities including MRI, CT, nuclear medicine and interventional radiological procedures employed for the modern imaging of tumoral and tumor-like lesions of bone. Their role in the diagnosis, surgical staging, biopsy and assessment of response to therapy is discussed in detail covering all tumor subtypes as well as their specific anatomical location. Well selected and technically impressive illustrations strongly enhance the didactic value of this work. I am very much indebted and grateful to the three editors A. Mark Davies, Murali Sundaram and Steven J. James world authorities in musculoskeletal radiology for their superb scientific achievement in preparing and editing this wonderful volume as well as for their individual chapters. I would also like to thank the large

international group of collaborating authors who are also widely acknowledged for their specific expertise in the area of bone tumors for their outstanding contributions **Vascular and Interventional Radiology** John A. Kaufman, Michael J.

Handbook of Angioplasty and Stenting Procedures Robert A.

Morgan,Eric Walser,2010-01-19 Despite the fact that Interventional Radiology is steadily moving toward a clinical specialty with the need for broad medical training daily craftsmanship will always remain fundamental to what an interventional radiologist does Without basic catheter and wire skills IR would not be what it is today When I watch experienced colleagues work I am always surprised to see that concerning the technique and the materials we all make the same choices There is apparently a common IR skill which is universal and can be learned with experience I always see this with new IR fellows that it takes time to step away from improvising and letting the procedure take the lead to logic and standardized control over a procedure Choosing the right materials for the right job and building a level of confidence with these materials is a very important part of any IR fellowship Why can a supervisor get a stable catheter position with a new wire in no time whereas the fellow almost gives up The difference is knowing your materials for this specific indication and combining routine and standardized operational procedures Hands on workshops are always very popular at every IR meeting because one can really learn about basic skills Lectures with the title How I do it can always count on a full audience
