Virtual Testing and Predictive Modeling Bahram Farahmand,2009-06-29 The materials used in manufacturing the aerospace aircraft automobile and nuclear parts have inherent aws that may grow under uctuating load environments during the operational phase of the structural hardware The design philosophy material selection analysis approach testing quality control inspection and manufacturing are key elements that can contribute to failure prevention and assure a trouble free structure To have a robust structure it must be designed to withstand the envir mental load throughout its service life even when the structure has pre existing aws or when a part of the structure has already failed If the design philosophy of the structure is based on the fail safe requirements or multiple load path design partial failure of a structural component due to crack propagation is localized and safely contained or arrested For that reason proper inspection technique must be scheduled for reusable parts to detect the amount and rate of crack growth and the possible need for repairing or replacement of the part An example of a fail sa designed structure with crack arrest feature common to all aircraft structural parts is the skin stiffened design con guration However in other cases the design p losophy has safe life or single load path feature where analysts must demonstrate that parts have adequate life during their service operation and the possibility of catastrophic failure is remote For example all pressurized vessels that have single load path feature are classi ed as high risk parts During their service operation these tanks may develop cracks which will grow gradually in a stable manner

JAYAGOPALAN,2024-09-18 The Fourth Industrial Revolution is being accelerated by the digital twin technological revolution which converges intelligent technologies and defines the connectivity between physical and digital items The Internet of Things IoT connects the real and digital worlds allowing connected items to deliver a vast array of services to internet users IoT devices create large amounts of data that may be fed into AI systems for decision making In a decentralized architecture digital twin technology may be utilized to protect platforms and create smart contracts Digital twins decentralized ledger immutability self sovereign identification and consensus procedures hold a lot of promise for improving AI algorithms Furthermore leveraging smart contracts in a digital twin system to facilitate user interaction via IoT might have a big influence and this integrated platform is expected to revolutionize many fields Digital Twin Technology and Applications examines the problems issues and solutions for using big data to enable streaming services using IoT and AI with digital twin technology The IoT network concept is the key to success and to establish a solid IoT platform on which large data transmission may take place it must handle protocol standards and architecture The book provides insight into the principles and techniques of IoT and AI It explores the idea of using blockchain to provide security in a variety of sectors The book also covers the application of integrated technologies to strengthen data models improve insights and discoveries innovate audit systems as well as digital twin technology application to intelligent forecasting smart finance smart retail global verification and transparent governance

Artificial Intelligence in Chemical Engineering Farooq Sher,2025-10-09 Artificial

Intelligence in Chemical Engineering explores the integration of artificial intelligence AI into various facets of chemical engineering The book introduces historical information highlights current state and trends in AI applications and discusses challenges and opportunities within the field Foundational principles of AI and machine learning are thoroughly covered giving readers a solid understanding of basic AI principles machine learning algorithms and the crucial processes of model training and validation The book then delves into the critical phase of data acquisition and preprocessing for AI models addressing strategies for data collection ensuring data quality and techniques for feature engineering and selection Subsequent chapters cover a wide spectrum of AI applications in chemical engineering From supervised and unsupervised learning for process modeling to the advanced realm of deep learning applications this book explores neural networks convolutional and recurrent architectures and their real world applications in process optimization and analysis Navigates the dynamic intersection of AI and chemical engineering covering ethical considerations interdisciplinary applications and AI

s impact on safety sustainability and innovation Bridges the gap between policy and implementation of AI in chemical engineering facilitating a harmonious integration of AI technologies and fostering responsible and effective use within the chemical engineering industry Offers a forward looking approach to guide professionals researchers and students in navigating the dynamic and transformative future of AI in chemical engineering

Porous lightweight composites reinforced with fibrous structures Yiqi Yang,Jianyong Yu,Helan Xu,Baozhong Sun,2017-07-30 This book will be a one stop shop for readers seeking information on lightweight composites made from multiple materials via diverse processing technologies The lightweight composites are featured for their potential to be basic construction units in a variety of areas especially automotive civil engineering aerospace engineering etc Emphasis will be on how fibers or fibrous structures reinforce the composites The subject of the book is to provide a comprehensive understanding on the raw materials processing technologies performance properties and end uses of lightweight composites
