Visualization Program Comprehension Software Landscapes:

Live Trace Visualization for System and Program Comprehension in Large Software Landscapes Florian Fittkau, 2015-12-03 In many enterprises the number of deployed applications is constantly increasing. Those applications often form large software landscapes. The comprehension of such landscapes is frequently impeded due to, for instance, architectural erosion, personnel turnover, or changing requirements. Furthermore, events such as performance anomalies can often only be understood in correlation with the states of the applications. Therefore, an efficient and effective way to comprehend such software landscapes in combination with the details of each application is required. In this thesis, we introduce a live trace visualization approach to support system and program comprehension in large software landscapes. It features two perspectives: a landscape level perspective using UML elements and an application level perspective following the 3D software city metaphor. Our main contributions are: 1. an approach named ExplorViz for enabling live trace visualization of large software landscapes; 2. a monitoring and analysis approach capable of logging and processing the huge amount of conducted method calls in large software landscapes; and 3. display and interaction concepts for the software city metaphor beyond classical 2D displays and 2D pointing devices. Extensive lab experiments show that our monitoring and analysis approach elastically scales to large software landscapes while imposing only a low overhead on the productive systems. Furthermore, several controlled experiments demonstrate an increased efficiency and effectiveness for solving comprehension tasks when using our visualization. ExplorViz is available as open source software on www.explorviz.net. Additionally, we provide extensive experimental packages of our evaluations to facilitate the verifiability and reproducibility of our results.

Human Machine Interaction Denis Lalanne, Juerg Kohlas, 2009-03-26 Human Machine Interaction, or more commonly Human Computer Interaction, is the study of interaction between people and computers. It is an interdisciplinary field connecting computer science with many other disciplines such as psychology, sociology, and the arts. The present volume documents the results of the MMI research program on Human Machine Interaction involving 8 projects selected from a total of 80 proposals funded by the Hasler Foundation between 2005 and 2008. These projects were also partially funded by the associated universities and other third parties such as the Swiss National Science Foundation. This state-of-the-art survey begins with three chapters giving overviews of the domains of multimodal user interfaces, interactive visualization, and mixed reality. These are followed by eight chapters presenting the results of the projects grouped according to the three aforementioned themes.

Software Ecosystems Tom Mens, Coen De Roover, Anthony Cleve, 2023-10-05 This book highlights recent research advances in various domains related to software ecosystems such as library reuse, collaborative development, cloud computing, open science, sentiment analysis, and machine learning. A key aspect of software ecosystems is that software products belong to ever more interdependent networks of co-evolving software components. The ever-increasing importance of social coding platforms has made software ecosystems indispensable to software practitioners in commercial as well as

open source settings The book starts with an introductory chapter that provides a historical account of the origins of software ecosystems It provides the necessary context about the domain of software ecosystems by highlighting its different perspectives definitions and representations It also exemplifies the variety of software ecosystems that have emerged during the previous decades The remaining book is composed of five parts Part I contains two chapters on software ecosystem representations Part II two chapters that focus on complementary ways and techniques of analyzing software ecosystems Next Part III includes two chapters that focus on aspects related to the evolution within software ecosystems while Part IV looks at workflow automation and infrastructure as code ecosystems Finally Part V focuses on ecosystems for software modeling and for data intensive software This book is intended for researchers and practitioners interested in data mining tooling and empirical analysis of software ecosystems The reader will appreciate chapters that cover a wide spectrum of social and technical aspects of software ecosystems each including an overview of the state of the art Chapter 2 The Software Heritage Open Science Ecosystem is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) *Fourth Workshop on Program Comprehension* Aniello Cimitile, Hausi A.
