Supply Chain Management And Its Applications In Computer Science:

Supply Chain Management and its Applications in Computer Science Saoussen Krichen, Sihem Ben Jouida, 2016-01-19 Supply chain management is a key topic for a large variety of strategic decision problems. It is essential in making efficient decisions related to the management of inventory and the delivery of final products to customers. The focus of this book is the understanding of the supply chain taxonomy, the different levels of decision and the impact of one level on another depending on the modeling of the addressed objectives. The authors explore the potential problems that can be addressed within the supply chain such as the inventory, the transportation and issues of holding and find applications in numerous fields of study from cloud computing and networking through to industrial sciences. The reader can find each issue described and its positioning in the supply chain determined. A computer science framework is also developed to show how the use of electronic platforms can aid in the handling of these potential problems. **Blockchain, IoT, and AI**

Technologies for Supply Chain Management Priyanka Chawla, Adarsh Kumar, Anand Nayyar, Mohd Naved, 2023-05-05 Supply chain management, often known as SCM, refers to the extensive variety of operations that are required to plan, monitor, and coordinate the movement of a product from its raw materials to its finished state in the most time and money efficient manner possible. How the supply chain is managed has an impact not only on the quality of the product and the service but also on the distribution costs and overall customer experience. Supply chain management is a massive undertaking that needs firms to reevaluate the method in which they operate their supply chains. **Blockchain, IoT, and AI Technologies for Supply Chain Management** discusses the problems and difficulties that the facilitators of the supply chain confront in addition to the possible solutions to such problems and difficulties. This book will be the only one of its kind to address the impact of COVID-19 on supply chain systems involving different stakeholders such as producers, dealers, and manufacturers and will provide a foundation for future research opportunities that will allow for the unrestricted expansion and prosperity of business. It will serve as a foundation for academics, scientists, and educationists interested in the use of modern technologies in the field of supply chain management such as the Internet of Things (IoT), Artificial Intelligence (AI), and Blockchain. In addition to those engaged in research, undergraduate and postgraduate students in higher education can also use this publication as a reference book. This book also presents a multifaceted perspective for the general public including topics such as computer science, the food business, hotel management, fashion, medical inventory management, and agricultural spheres.
