Political power and industrialization in  
the global periphery**

(Atul Kohli. Cambridge: Cambridge University Press, 2004)

**Bruno Borges**

Duke University, US

If life was hard for late-industrializers at the end of the nineteenth century, it became even more so for late-late-industrializers in the twentieth century. This seems to be the overall message that Kohli highlights in his impressive survey and comparison of industrialization in four large developing countries. There are many profound challenges involved in this process. First, it is impossible to promote economic development in a vacuum, since every country is somehow connected with the international system, especially countries that were formerly colonies of the main industrial core. Second, the stages of economic interconnectedness force these countries to promote several processes simultaneously: state and institutional building, economic growth, and, if possible, “catching up” with development in an international scale. Third, the shadows of previous institutions are legacies that may facilitate or hinder development projects. Finally, as Gerschenkron argued in the 1960s, as technological changes increase in the international system, the role of the state in promoting development (or at least inducing) becomes even more central (Gerschenkron 1962), generating, in certain cases, perverse incentives for bureaucrats to act without any accountability to the public at large.

Being aware of these limitations, Kohli focuses his research on four major developing countries: Brazil, South Korea, Nigeria, and India. It is not by accident that these particular countries are chosen to study – large developing countries have some distinct characteristics that distinguish them from smaller ones, being the main one the possibility of developing more or less autonomous economies and generating an industrialization process based on national borders. Small states, as Katzenstein (1985) argues, are more exposed to risk in the international system and more likely to suffer from the effects of systemic changes. However, having the potential for industrialization does not translate directly into having the capacity to promote it, or even the conditions to carry it through.

**State-Directed Development** Atul Kohli, 2004-08-30 Why have some developing country states been more successful at facilitating industrialization than others An answer to this question is developed by focusing both on patterns of state construction and intervention aimed at promoting industrialization Four countries are analyzed in detail South Korea Brazil India and Nigeria over the twentieth century The states in these countries varied from cohesive capitalist mainly in Korea through fragmented multiclass mainly in India to neo patrimonial mainly in Nigeria It is argued that cohesive capitalist states have been most effective at promoting industrialization and neo patrimonial states the least The performance of fragmented multiclass states falls somewhere in the middle After explaining in detail as to why this should be so the study traces the origins of these different state types historically emphasizing the role of different types of colonialisms in the process of state construction in the developing world *State - Directed Development* Atul Kohli, 2005

Krieckhaus, 2010-06-15 Dictating Development presents a powerful and original analysis of how colonialism has profoundly impacted the varying economic growth of developing nations While previous studies have focused primarily on the domestic neoliberal policies of government and the political capacity of developing states Dictating Development argues that economic growth is equally influenced positively and negatively by colonial powers Jonathan Krieckhaus examines both historic colonial influences on human capital and state structures as well as contemporary ones war market access and foreign aid Based on an in depth study of the regionally diverse nations of Mozambique Korea and Brazil and a statistical analysis of growth in ninety one countries from 1960 to 2000 Krieckhaus effectively demonstrates that most seemingly domestic political variables are in fact the byproduct of relationships with colonial powers While not denying the role of neoliberalism as an important factor in development Dictating Development reveals the roots of these policies how colonialism influences the very nature of government and societal productivity *Beyond the Resource Curse* Brenda Shaffer, Taleh Ziyadov, 2011-12-30 When countries discover that they possess large deposits of oil and natural gas the news is usually welcome Yet paradoxically if they rely on their wealth of natural resources they often set down a path of poor economic performance and governance

challenges Only a few resource rich countries have managed to develop their economies fully and provide a better and sustainable standard of living for large segments of their populations This phenomenon known as the resource curse is a core challenge for energy exporting states Beyond the Resource Curse focuses on this relationship between natural wealth and economic security discussing the particular pitfalls and consistent perils facing oil and gas exporting states The contributors to this volume look beyond the standard fields of research related to the resource curse They also shed new light on the specific developmental problems of resource rich exporting states around the globe including Azerbaijan Bahrain Cambodia East Timor Iran Norway Russia Trinidad and Tobago the United Arab Emirates and Venezuela Policy makers and academics think of energy security solely in terms of the interests of energy importers Beyond the Resource Curse shows that the constant volatility in energy markets creates energy security challenges for exporters as well

**Computing in the Age of Decolonization** Dwaipayan Banerjee, 2026-02-24 How Cold War geopolitics and domestic capitalism changed the trajectory of India's computing industry India today is widely recognized for producing world class tech talent and Silicon Valley leaders yet captures only a fraction of the global tech industry's profits primarily providing skilled but inexpensive labor for Western corporations Computing in the Age of Decolonization uncovers the overlooked history behind this paradox tracing India's ambitious but ultimately thwarted drive to build a self-reliant computing industry from the 1950s to the 1980s After independence in 1947 Indian scientists and policymakers at institutions such as the Tata Institute of Fundamental Research saw computing as central to national sovereignty economic growth and scientific advancement Through projects such as the groundbreaking TIFRAC computer and the decisive expulsion of IBM they aimed for technological independence But almost immediately these initiatives faced powerful political and economic headwinds Indian computer scientists grappled with Cold War politics international trade imbalances US corporate monopolies and strategic decisions by India's technocratic elite who favored profitable technical services over costly investments in research and manufacturing In narrating this lost future Computing in the Age of Decolonization shows that genuine technological independence requires more than technical expertise it demands addressing enduring political and social structures rooted in colonial legacies As global struggles over technology intensify this book reveals how historical pathways continue to shape contemporary battles for technological and economic sovereignty

**Globalization, Development and The State** Jørgen Dige Pedersen,2008-08 This book presents the story of how India and Brazil have managed the challenges of economic globalization since 1990 Using an innovative combination of theories of developmental states with theories on the changing nature of global capitalism the analysis presented here explains how India and Brazil have successfully managed those challenges that the opening of their economies has introduced and their different degrees of success The key to their economic performance lies in the establishment of new and more intensive

forms of business state collaboration which ensures that policy initiatives have progressively been adapted to the interests and capabilities of the domestic business class The analysis points to a new theoretical perspective on developmental states In an increasingly knowledge intensive global economy developmental states acquire new forms that are more collaborative and democratic in contrast to earlier authoritarian states They also need strong inputs of an intellectual nature making authoritarian solutions less likely to succeed Book cover *Financing a State System of Highways* University Interscholastic League (Tex.),1929 **Growing Apart** Peter Lewis,2007-04-17 Growing Apart is an important and distinguished contribution to the literature on the political economy of development Indonesia and Nigeria have long presented one of the most natural opportunities for comparative study Peter Lewis one of America s best scholars of Nigeria has produced the definitive treatment of their divergent development paths In the process he tells us much theoretically about when why and how political institutions shape economic growth Larry Diamond Senior Fellow Hoover Institution Growing Apart is a careful and sophisticated analysis of the political factors that have shaped the economic fortunes of Indonesia and Nigeria Both scholars and policymakers will benefit from this book s valuable insights Michael L Ross Associate Professor of Political Science Chair of International Development Studies UCLA Lewis presents an extraordinarily well documented comparative case study of two countries with a great deal in common and yet with remarkably different postcolonial histories His approach is a welcome departure from currently fashionable attempts to explain development using large multi country databases packed with often dubious measures of various aspects of governance Ross H McLeod Editor Bulletin of Indonesian Economic Studies This is a highly readable and important book Peter Lewis provides us with both a compelling institutionalist analysis of economic development performance and a very insightful comparative account of the political economies of two highly complex developing countries Nigeria and Indonesia His well informed account generates interesting findings by focusing on the ability of leaders in both countries to make credible commitments to the private sector and assemble pro growth coalitions This kind of cross regional political economy is often advocated in the profession but actually quite rare because it is so hard to do well Lewis s book will set the standard for a long time Nicolas van de Walle John S Knight Professor of International Studies Cornell University Peter M Lewis is Associate Professor and Director of the African Studies Program Johns Hopkins University School of Advanced International Studies **The International Journal of Accounting Education and Research** ,1975 **Politics in Liberia** Martin Lowenkopf,1976 **Texas Educational Survey Report ...
