Statistical Image Processing and Multidimensional Modeling: Modelling of random fields Paul Fieguth, 2011

Statistical Image Processing and Multidimensional Modeling Paul Fieguth, 2010-10-17 Images are all around us. The proliferation of low cost high quality imaging devices has led to an explosion in acquired images. When these images are acquired from a microscope telescope satellite or medical imaging device there is a statistical image processing task: the inference of something: an artery a road a DNA marker an oil spill from imagery possibly noisy blurry or incomplete. A great many textbooks have been written on image processing. However this book does not so much focus on images per se but rather on spatial data sets with one or more measurements taken over a two or higher dimensional space and to which standard image processing algorithms may not apply. There are many important data analysis methods developed in this text for such statistical image problems. Examples abound throughout: remote sensing satellite data mapping data assimilation climate change studies land use medical imaging organ segmentation anomaly detection computer vision image classification segmentation and other 2D 3D problems biological imaging porous media. The goal then of this text is to address methods for solving multidimensional statistical problems. The text strikes a balance between mathematics and theory on the one hand versus applications and algorithms on the other by deliberately developing the basic theory. Part I: the mathematical modeling. Part II: and the algorithmic and numerical methods. Part III: of solving a given problem. The particular emphases of the book include inverse problems multidimensional modeling random fields and hierarchical methods. [The Probabilistic Vision of the Physical World](#) Fernando Sansò, Alberta Albertella, 2025-06-16 This book investigates the relationship between empirical reality and theoretical modelling in Earth sciences focusing on how empirical experiments and theoretical models interact. It explores the connection between statistics and probability theory emphasizing the importance of these tools in understanding the physical world. The first chapter addresses the frequency probability antinomy while the second chapter discusses the sources of randomness in modelling. Chapters 3 and 4 delve into statistical inference covering estimation theory and testing theory. Chapter 5 examines the relationship between discrete finite models and continuous infinite dimensional models particularly random fields making the concepts accessible to geodesists and geophysicists. Chapter 6 explores modern machine learning and deep learning highlighting their roots in traditional statistical methods and neural networks. The book concludes with a caution against relying solely on empirical evidence and black box algorithms advocating for the integration of physical laws with empirical models to advance understanding of the physical world. The book is primarily intended for graduate students and researchers in the field of earth sciences with a basic background in probability theory and statistics.

Computer Vision Techniques for the Diagnosis of Skin Cancer Jacob Scharcanski, M. Emre Celebi, 2013-09-30 The goal of this volume is to summarize the state of the art in the utilization of computer vision techniques in the diagnosis of skin cancer Malignant melanoma is one of the most rapidly increasing cancers in the world Early diagnosis is particularly important since melanoma can be cured with a simple excision if detected early In recent years dermoscopy has proved valuable in visualizing the morphological structures in pigmented lesions However it has also been shown that dermoscopy is difficult to learn and subjective Newer technologies such as infrared imaging multispectral imaging and confocal microscopy have recently come to the forefront in providing greater diagnostic accuracy These imaging technologies presented in this book can serve as an adjunct to physicians and provide automated skin cancer screening Although computerized techniques cannot as yet provide a definitive diagnosis they can be used to improve biopsy decision making as well as early melanoma detection especially for patients with multiple atypical nevi

Mathematical Nonlinear Image Processing Edward R. Dougherty, Jaakko Astola, 2012-12-06 Mathematical Nonlinear Image Processing deals with a fast growing research area The development of the subject springs from two factors 1 the great expansion of nonlinear methods applied to problems in imaging and vision and 2 the degree to which nonlinear approaches are both using and fostering new developments in diverse areas of mathematics Mathematical Nonlinear Image Processing will be of interest to people working in the areas of applied mathematics as well as researchers in computer vision Mathematical Nonlinear Image Processing is an edited volume of original research It has also been published as a special issue of the Journal of Mathematical Imaging and Vision Volume 2 Issue 2 3
