In the era of big data and real time monitoring vast amounts of information are generated every second through sensors and advanced tracking systems. The information contained in the data needs to be carefully analyzed and accurate results must be delivered to the users as soon as possible. This book explores the critical role of statistics in modern technologies and applied sciences such as health informatics and production systems. **Statistical Methods and Applications in Systems Assurance and Quality** provides a comprehensive overview of statistical methods for ensuring system quality and reliability. It discusses best practices for improving the quality of manufacturing products by using proper statistical methods. The book covers the current state of statistical methods used for system quality and conveys the importance of healthcare systems and employing statistics in the detection of epidemic outbreaks. Designed for researchers, industry professionals and academics, this reference is ideal for those working in manufacturing, healthcare, computer engineering, statistical process control and machine learning applications. It serves as a valuable resource for anyone seeking to enhance system performance through data driven insights.      **Introduction to Statistical Quality Control** Douglas C. Montgomery. This book is about the use of modern statistical methods for quality control and improvement. It provides comprehensive coverage of the subject from basic principles to state of the art concepts and applications. The objective is to give the reader a sound understanding of the principles and the basis for applying them in a variety of situations. Although statistical techniques are emphasized throughout the book, a strong engineering and management orientation is maintained. It offers practitioners expert guidance on how to implement adequate statistical process control (SPC) which takes account of the capability to ensure a stable process and then regulate if variations take place due to variables other than a random variation. Powerful engineering models of new product introduction (NPI), continuous improvement (CI) and the eight disciplines 8D model of problem solving techniques are explained. The final three chapters introduce new methodological models in operations research (OR) and their applications in engineering, including the hyper hybrid coordination for process effectiveness and production efficiency and the Kraljic/Tesfay portfolio matrix of industrial buying.
