

The background of the cover is a dark, atmospheric photograph of a forest. In the foreground, a path or stream is visible, which is illuminated with a vibrant, multi-colored glow (red, orange, yellow, green, blue) that recedes into the distance. The trees are mostly bare, suggesting a late autumn or winter setting. The overall tone is mysterious and contemplative.

Statistics Third Edition:

An Introduction to Statistical Concepts Richard G Lomax, Debbie L. Hahs-Vaughn, 2013-06-19 This comprehensive flexible text is used in both one and two semester courses to review introductory through intermediate statistics. Instructors select the topics that are most appropriate for their course. Its conceptual approach helps students more easily understand the concepts and interpret SPSS and research results. Key concepts are simply stated and occasionally reintroduced and related to one another for reinforcement. Numerous examples demonstrate their relevance. This edition features more explanation to increase understanding of the concepts. Only crucial equations are included. In addition to updating throughout the new edition features New co author Debbie L Hahs Vaughn the 2007 recipient of the University of Central Florida's College of Education Excellence in Graduate Teaching Award. A new chapter on logistic regression models for today's more complex methodologies. More on computing confidence intervals and conducting power analyses using G Power. Many more SPSS screenshots to assist with understanding how to navigate SPSS and annotated SPSS output to assist in the interpretation of results. Extended sections on how to write up statistical results in APA format. New learning tools including chapter opening vignettes, outlines, and a list of key concepts, many more examples, tables, and figures, boxes, and chapter summaries. More tables of assumptions and the effects of their violation, including how to test them in SPSS. 33% new conceptual, computational, and all new interpretative problems. A website that features PowerPoint slides, answers to the even numbered problems, and test items for instructors and for students, the chapter outlines, key concepts, and datasets that can be used in SPSS and other packages, and more. Each chapter begins with an outline, a list of key concepts, and a vignette related to those concepts. Realistic examples from education and the behavioral sciences illustrate those concepts. Each example examines the procedures and assumptions and provides instructions for how to run SPSS, including annotated output and tips to develop an APA style write up. Useful tables of assumptions and the effects of their violation are included along with how to test assumptions in SPSS. Stop and Think boxes provide helpful tips for better understanding the concepts. Each chapter includes computational, conceptual, and interpretive problems. The data sets used in the examples and problems are provided on the web. Answers to the odd numbered problems are given in the book. The first five chapters review descriptive statistics, including ways of representing data graphically, statistical measures, the normal distribution, and probability and sampling. The remainder of the text covers inferential statistics involving means, proportions, variances, and correlations, basic and advanced analysis of variance, and regression models. Topics not dealt with in other texts, such as robust methods, multiple comparison, and nonparametric procedures, and advanced ANOVA and multiple and logistic regression models are also reviewed. Intended for one or two semester courses in statistics taught in education and/or the behavioral sciences at the graduate and/or advanced undergraduate level, knowledge of statistics is not a prerequisite. A rudimentary knowledge of algebra is required.
