**Start Guide to PostgreSQL and SQLite Driven Programming** Vivian Siahaan, Rismon Hasiholan Sianipar, 2019-11-25 This book explains relational theory in practice and demonstrates through two projects how you can apply it to your use of PostgreSQL and SQLite databases This book covers the important requirements of teaching databases with a practical and progressive perspective This book offers the straightforward practical answers you need to help you do your job This hands

on tutorial reference guide to PostgreSQL and SQLite is not only perfect for students and beginners but it also works for experienced developers who aren't getting the most from both databases. In designing a GUI and as an IDE you will make use of Qt Designer. In the first chapter you will learn to use several widgets in PyQt5: Display a welcome message, Use the Radio Button widget, Grouping radio buttons, Displays options in the form of a check box and Display two groups of check boxes. In chapter two you will learn to use the following topics: Using Signal Slot Editor, Copy and place text from one Line Edit widget to another, Convert data types and make a simple calculator, Use the Spin Box widget, Use scrollbars and sliders, Using the Widget List, Select a number of list items from one Widget List and display them on another Widget List, widget Add items to the Widget List, Perform operations on the Widget List, Use the Combo Box widget, Displays data selected by the user from the Calendar Widget, Creating a hotel reservation application and Display tabular data using Table Widgets. In chapter three you will learn How to create the initial three tables project in the School database Teacher Class and Subject tables, How to create database configuration files, How to create a Python GUI for inserting and editing tables, How to create a Python GUI to join and query the three tables. In chapter four you will learn how to Create a main form to connect all forms, Create a project, will add three more tables to the school database Student, Parent and Tuition tables, Create a Python GUI for inserting and editing tables, Create a Python GUI to join and query over the three tables. In chapter five you will join the six classes Teacher, TClass, Subject, Student, Parent and Tuition and make queries over those tables. In chapter six and chapter seven you will get introduction of postgresql, And then you will learn querying data from the postgresql using Python including establishing a database connection, creating a statement object, executing the query, processing the resultset object, querying data using a statement that returns multiple rows, querying data using a statement that has parameters, inserting data into a table using Python, updating data in postgresql database using Python, calling postgresql stored function using Python, deleting data from a postgresql table using Python and postgresql Python transaction. In chapter eight you will create and configure PostgreSQL database. In this chapter you will create Suspect table in crime database. This table has eleven columns: suspect\_id (primary key), suspect\_name, birth\_date, case\_date, report\_date, suspect\_status, arrest\_date, mother\_name, address, telephone and photo. You will also create GUI to display, edit, insert and delete for this table. In chapter nine you will create a table with the name Feature\_Extraction which has eight columns: feature\_id (primary key), suspect\_id (foreign key), feature1, feature2, feature3, feature4, feature5 and feature6. The six fields except keys will have a VARCHAR data type 200. You will also create GUI to display, edit, insert and delete for this table. In chapter ten you will create two tables Police and Investigator. The Police table has six columns: police\_id (primary key), province, city, address, telephone and photo. The Investigator table has eight columns: investigator\_id (primary key), investigator\_name, rank, birth\_date, gender, address, telephone and photo. You will also create GUI to display, edit, insert and delete for both tables. In chapter eleven you will create two tables Victim and Case\_File. The Victim table has nine columns: victim\_id (primary key), victim\_name, crime\_type, birth\_date, crime\_date, gender, address.

telephone and photo The Case\_File table has seven columns case\_file\_id primary key suspect\_id foreign key police\_id foreign key investigator\_id foreign key victim\_id foreign key status and description You will create GUI to display edit insert and delete for both tables as well

**Hands-on Signal Analysis with Python** Thomas Haslwanter,2021-05-31 This book provides the tools for analyzing data in Python different types of filters are introduced and explained such as FIR IIR and morphological filters as well as their application to one and two dimensional data The required mathematics are kept to a minimum and numerous examples and working Python programs are included for a quick start The goal of the book is to enable also novice users to choose appropriate methods and to complete real world tasks such as differentiation integration and smoothing of time series or simple edge detection in images An introductory section provides help and tips for getting Python installed and configured on your computer More advanced chapters provide a practical introduction to the Fourier transform and its applications such as sound processing as well as to the solution of equations of motion with the Laplace transform A brief excursion into machine learning shows the powerful tools that are available with Python This book also provides tips for an efficient programming work flow from the use of a debugger for finding mistakes code versioning with git to avoid the loss of working programs to the construction of graphical user interfaces GUIs for the visualization of data Working well documented Python solutions are included for all exercises and IPython Jupyter notebooks provide additional help to get people started and outlooks for the interested reader
