

Name: \_\_\_\_\_

Date: \_\_\_\_\_

## Student Exploration: Coulomb Force (Static)

**Vocabulary:** Coulomb's law, electrostatic force, vector

**Prior Knowledge Questions (Do these BEFORE using the Gizmo.)**

Have you ever taken clothes out of the dryer and found a sock stuck to your underwear? Static cling is an example of **electrostatic forces**, or the forces that exist between charged objects.

1. How do you think the sock and underwear became charged? \_\_\_\_\_

*During the drying process, electrons were removed from some items of clothing and deposited on others.*

2. Suppose two socks acquire the same charge. Do you think they would stick together? No

*Explain: The socks would not stick together because like charges repel.*

**Gizmo Warm-up**

As clothes are tumbled in a dryer, electrons are rubbed off some items, giving them a positive charge, and deposited on other items, giving them a negative charge. These charged items exert electrostatic forces on one another. You can explore these forces with the *Coulomb Force (Static)* Gizmo.

In its initial settings, the Gizmo shows two objects that each have a charge ( $q$ ) of  $10.0 \times 10^{-4}$  C (coulombs). Turn on the **Show force vector** checkboxes for objects **A** and **B**. The arrows coming from each object are **vectors** that represent the electrostatic force. The direction and length of each vector show the direction and magnitude (strength) of each force.

1. Are the vectors for objects **A** and **B** pointing together or away from each other? Away
2. Are objects **A** and **B** attracted together or repelled apart? repelled apart
3. Compare the lengths of the vectors. What do you notice? the vectors are equal in length
