## Surface Architecture:

**Surface Architecture** David Leatherbarrow, Mohsen Mostafavi, 2005-02-11 A study of the building surface architecture as primary instrument of identity and engagement with its surroundings Visually many contemporary buildings either reflect their systems of production or recollect earlier styles and motifs This division between production and representation is in some ways an extension of that between modernity and tradition In this book David Leatherbarrow and Mohsen Mostafavi explore ways that design can take advantage of production methods such that architecture is neither independent of nor dominated by technology Leatherbarrow and Mostafavi begin with the theoretical and practical isolation of the building surface as the subject of architectural design The autonomy of the surface the free facade presumes a distinction between the structural and nonstructural elements of the building between the frame and the cladding Once the skin of the building became independent of its structure it could just as well hang like a curtain or like clothing The focus of the relationship between structure and skin is the architectural surface In tracing the handling of this surface the authors examine both contemporary buildings and those of the recent past Architects discussed include Albert Kahn Ludwig Mies van der Rohe Alison and Peter Smithson Alejandro de la Sota Robert Venturi Jacques Herzog and Pierre de Meuron The properties of a building's surface whether it is made of concrete metal glass or other materials are not merely superficial they construct the spatial effects by which architecture communicates Through its surfaces a building declares both its autonomy and its participation in its surroundings

**The American Architect**, 1918 *Towards a Critique of Architecture's Contemporaneity* Gevork Hartoonian, 2023-02-14 Pursuing historical analogies between nineteenth century theories and the current practices captivated by digital reproducibility this book offers a critical take on architecture's contemporaneity through four essays tectonics materiality cladding and labor Fundamental to this proposition is the historicity of Gottfried Semper's theorization of architecture amidst the outpouring of new materials and construction techniques during the 1850s Starting with Semper's differentiation between theatricalization and the tectonic of theatricality this book examines thematic essential to architecture's self representation Even though the title of this book recalls the Semperian Four Elements of Architecture its argument encapsulates a unique historico theoretical project probing the tectonic of theatricality beyond Semper The invisible tie between technique and labor is the cord running through the four subjects covered in this book In exploring these subjects from the theoretical standpoint of Marxian dialectics this book's contribution is focused on but not limited to the topicality of labor today when its relationship with capital has been further obscured by the prevailing digitalization of commodity exchange value starting roughly in the 1990s Each essay examines Semper's theorization of architecture in

contradistinction to the ways in which technology's mediation has dominated architecture's representation Burrowing through the invisible tie between technique and work asymptomatic of architecture's predicament in global capitalism Towards a Critique of Architecture's Contemporaneity advances the scope of architectural criticism beyond the exhausted formalism and architecture's turn to philosophy circa the 1980s and the present tendencies for presentism It will therefore be of interest to researchers and students of architectural history and theory

**Architecture**, 1907      **Designing Kinetics for Architectural Facades** Jules Moloney, 2011-06-14 Architectural facades now have the potential to be literally kinetic through automated sunscreens and a range of animated surfaces This book explores the aesthetic potential of these new types of moving facades Critique of theory and practice in architecture is combined here with ideas from kinetic art of the 1960s From this background the basic principles of kinetics are defined and are used to generate experimental computer animations By classifying the animations a theory of kinetic form called state change is developed This design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture Extra material including animations can be seen at [www.kineticarch.net/statechange](http://www.kineticarch.net/statechange)
