Believing Michael McGuire, 2013-09-10 A new book about brain chemistry neural systems and the formation of beliefs from the scientist who brought to light serotonin's many crucial roles in human behavior Beliefs What are they How have evolution and culture led to a brain that is seemingly committed to near endless belief creation And once established why are most beliefs so difficult to change Believing offers answers to these questions from the perspective of a leading neuroscientist and expert in brain behavior research Combining personal anecdotes and the latest research Dr McGuire takes the novel approach of focusing on the central and critical role of brain systems and the ways in which they interact with the environment to create and maintain beliefs This approach yields some surprising and counterintuitive conclusions The brain is designed for belief creation and acceptance It is biased in favor of its own beliefs and is highly insensitive to

disconfirming evidence It prefers beliefs that are pleasurable and rewarding to those that are unfavorable Beliefs are afterthoughts of unperceived brain activities they don't cause behavior Our consciousness has minimal influence on the neural systems that create beliefs Based on these observations McGuire concludes that for the foreseeable future people will continue to hold a multitude of beliefs many of them intransigent

its perceived failings and shortcomings Sonnert also shows that Einstein's quest was deeply motivated by a broadly defined religious impulse Here again the physicist reveals himself to be a true creature of Kultur epitomising the German scientist priest In conclusion Sonnert argues that the mass exodus during the Nazi regime of German scientists and intellectuals including Einstein marked a demise of Kultur However this cataclysm also resulted in a fertile synthesis between the German Kultur inspired science and the quite different American scientific tradition This is a fascinating insightful and original study of a neglected aspect of Einstein's life and work from cover [Book Review Index](#) ,2003 Every 3rd issue is a quarterly cumulation **New Scientist** ,2002 **Handbook of Primary Care Psychology** Leonard J.
