

Factors for cloud computing security assessment

This slide highlights the factors to be considered when conducting the risk analysis for data protection. Various factors include transparency, encryption and colocation.

Transparency

- Check the transparency of security-relevant data for the customers
- Helps in identifying potential security threats and developing right countermeasures
- Add text here

Encryption

- Ensure auditing of the encrypted data to protect and prevent the database hackers
- Helps in preventing storage system breaches

Analysis of Data Security & Management In Hybrid Cloud Computing Environment. Dr. Ashad ullah Qureshi,2022-06-01 Companies offering services on the Internet have led corporations to shift from the high cost of owning and maintaining stand alone privately owned and operated infrastructure to a shared infrastructure model These shared infrastructures are being offered by infrastructure service providers which have subscription or pay on demand charge models presenting compute and storage resources as a generalized utility Utility based infrastructures that are run by service providers have been defined as cloud computing by the National Institute of Standards and Technology In the cloud computing model the concerns of security and privacy protections are exacerbated due to the requirement for an enterprise to allow third parties to own and manage the infrastructure and be custodians of the enterprises information With this new architectural model there are new hybrid governance models designed to support complex and uncertain environments
