Telemedicine For Childrens Health Tele Health:

Telemedicine for Children's Health Fabio Capello,Andrea E. Naimoli, Giuseppe Pili, 2014-07-30 This book describes in detail the potential role of ICT and electronic systems together with the application of Web 2.0 technologies in telepediatrics and child health. Rather than simply proposing engineering solutions that may soon become outdated, it is designed to address those real needs that telemedicine and developers are asked to meet. The orientation of the book is very much toward primary care and both low and high income settings as well as extreme or complex scenarios are considered. The first two sections of the book describe different fields of application such as the community, the hospital and children with chronic illnesses or special needs and examine technical issues. The use of telemedicine in delivery of care in extreme rural settings and developing countries is then discussed with attention also to major emergencies and humanitarian crises. The closing chapters consider the role of modern technologies in the education of caregivers who work with children. Child health is a crucial issue in both industrialized and developing countries. *Telemedicine for Children's Health* will be an excellent guide to the potential value of telemedicine devices in reducing the burden for children and parents and in offering quick and concrete solutions in low resource scenarios.

Telepediatrics: Telemedicine and Child Health Amanda Oakley, 2024-11-01 Recommended to all health professionals currently working or planning to set up services in paediatrics and telemedicine. Specialist services including Fetal medicine, Child psychiatry, Diabetes, Asthma, Burns, Paediatric surgery clinics, Sexual abuse, Tele ophthalmology, Teleradiology and image transfer, Tele ENT, Primary and community services including Telemedicine and under served communities, US and developing countries, Palliative care, Rehabilitation, Telephone help lines for parents, Education services including Education of doctors, Grand Rounds in Queensland Australia, Educational videoconferences for parents in the Bronx and websites for parents and children.

Telepediatrics: Telemedicine and Child Health Richard Wootton, Jennifer Batch, 2005 Wootton Centre for Online Health, University of Queensland, Batch Endocrinology, Royal Children's Hospital, and contributors discuss barriers to the development of telepediatrics as well as providing numerous case studies which demonstrate how health services and education can and have been successfully delivered to health professionals, patients and families who are remote from the source of expertise. Chapters focus on specialist services and cover topics such as telecardiology in Canada and Australia, telemedicine applications in the management of asthma, intensive care unit telemedicine, tele ophthalmology, telemedicine in physical and/or sexual abuse, telemedicine and underserved communities in developing nations, telemedicine and pediatric surgery, telephone help lines for parents, educational videoconferences for parents in the Bronx and Internet sites for parents, children and young people.

Annotation 2004 Book News Inc Portland OR booknews.com **Handbook of Mental Health Services for Children, Adolescents, and Families** Ric G. Steele, Michael C. Roberts, 2006-03-30 Social economic and theoretical changes in the

current clinical landscape are adding up to profound changes in children's services not the least of which is an expanded need for mental health services. Professionals novices and veteran clinicians alike wonder how to fill this demand in the present climate of turf wars reorganizations and budget cuts. The Handbook of Mental Health Services for Children Adolescents and Families cogently analyzes the issues and provides the answers from current issues and emerging therapeutic trends to new avenues of treatment. Thoroughly researched and documented by industry experts it presents the widest range of mental health services available to youth and their families. Areas of coverage include Specific modalities in service delivery including in patient and day treatment facilities pediatric hospitals and community mental health centers as well as rural school and primary care settings. Services tailored to special populations such as adolescent sex offenders homeless children and their families children with chronic illness oppositional teens abuse situations and children exposed to traumatic events. Details on preventative programs for child abuse substance abuse STD's and gang violence. An in depth examination of the latest developments in children's services including therapeutic camping and Internet based treatment. Approaches and methods for evaluating service organization delivery and efficacy. Few areas of mental health care demonstrate the need for complementary services as much as child and family practice does. With this need firmly in mind the Handbook encourages creativity and collaboration within practice settings and across agencies. For clinicians administrators school practitioners and advanced level students this is a reference certain to have lasting impact on the field.

Telehealth in Pediatrics Tzielan Lee,Mark Lo,2022-06-29 *Pediatric Telehealth Best Practices* American Academy of

Pediatrics (AAP),2022-06-23 Use of telehealth was already on the rise before the COVID 19 public health emergency but the pandemic has brought it to the forefront of medical care. With its increased use came a lot of questions. How can I assist pediatric patients with limited access to technology? Do this patient's symptoms make them a good candidate for telehealth? How do I code this visit? Pediatric Telehealth Best Practices answers those questions and seeks to help pediatric providers develop efficient effective telehealth services within their own practices. Pediatric Telehealth Best Practices goes beyond AAP policy to offer straightforward strategies for establishing and sustaining a successful telehealth program. Its contents are curated from AAP published content including guidance from the Section on Telehealth Care as well as journals and books.

Telehealth for Pediatricians,An Issue of Pediatric Clinics of North America, E-Book C.Jason Wang,Josip Car,Barry S Zuckerman,2020-08-06 In collaboration with Consulting Editor Dr Bonita Stanton the Guest Editors of this issue of Pediatric Clinics of North America have comprehensively reviewed the current and future opportunities for implementing telehealth into pediatric practice. Expert authors have written review articles that provide information based on current knowledge of implementation of technologies but also ask questions about how to implement and what potential challenges there will be. Articles are specifically devoted to Overview of Telehealth for Pediatricians, Role of Doctor Patient Relationship in Telehealth, Design Purpose and Design Thinking for Telehealth, How to Implement Telehealth in Pediatrics, Issues Related to Adoption of Health Apps and Telemedicine Programs, Workforce Trends and Business Model for Telehealth, Moral Political and Economic and Social Dilemmas of Telehealth, Automated Digital Health with Big Data, Predictive Analytics and AI, Tele rounds and Cased Based Training, Role of Text messaging and Messaging apps in telehealth, High Quality Telehealth Training Programs, Technical and Regulatory Issues of Telehealth Medicine and Global Health Perspective on Telehealth. Pediatric Telemedicine Using Health and Economic Methods Hsuan-Hui Yang,2014 Telemedicine is defined as the exchange of medical information from one site to another using electronic communication to improve patient's health status. The applications of telemedicine include many models of care but are frequently used in the inpatient setting, the outpatient setting, emergency departments and home health. Novel telehealth program specific to the University of California Davis Children's Hospital UC Davis Children's Hospital include the use of telemedicine to connect hospitalized patients and their family and friends and delivery of specialty consultations in emergency departments. However, there are limited data and studies that examine the impact of telemedicine in these settings specifically how telemedicine can impact the pediatric hospitalized patient's experience, health outcomes for children seen in emergency departments and economic outcomes of telemedicine when used to provide consultations to the emergency departments. Therefore, we evaluated the impact of

telemedicine on these clinical and economic outcomes with various perspectives and analyses First we evaluated the impact of telemedicine on the reduction in stress experienced by hospitalized children in an urban hospital setting University of California Davis Children s Hospital has established the Family Link program a videoconferencing program to allow hospitalized children and their parents to virtually visit family members and friends using laptops webcams and a secure Wi Fi connection In this prospective cohort study of 367 hospitalized children who participated in the stress reduction study at the Children s Hospital between 2011 and 2013 232 children participated in the Family Link program and 135 did not participate We examined the association of patient age gender length of hospitalization and distance from children s home to the hospital with the children s level of stress through a propensity score matching model We found that the use of Family Link was significantly associated with a greater reduction in overall mean stress during hospitalization compared to non Family Link users We found this association particularly among the cohort of patients who lived closer to the hospital and had shorter lengths of hospitalization In this cohort the reduction in overall mean stress was 37% greater among Family Link users than non Family Link users Second we evaluated the impact of telemedicine consultations that are provided to acutely ill and injured children presenting to rural emergency departments ED We examined the association between patients receiving telemedicine on the appropriateness of hospital admission In this retrospective cohort study of 138 acutely ill and injured children who presented to the rural EDs between 2003 and 2012 74 children received telemedicine pediatric critical care consultations and 64 children received telephone pediatric critical care consultations We further calculated and compared the overall and stratified low and high risk for admission observed to expected hospital admission ratios O E admission ratios between the telemedicine and telephone cohorts by calculating the risk of admission using the Pediatric Risk of Admission PRISA II and the Revised Pediatric Emergency Assessment Tool RePEAT We found that the telemedicine cohort experienced a trend towards lower and more favorable overall O E admission ratios compared to the telephone cohort Telemedicine consultations resulted in more appropriate hospital admissions by 8 4% using PRISA II and 2 4% using RePEAT We also found a higher rate of appropriate admissions when we stratified the patient populations into low and high risk of admission cohorts Telemedicine consultations again resulted in more appropriate hospital admission for both PRISA II low risk 23 9% high risk 9 3% and RePEAT low risk 14 7% high risk 19 9% Lastly we conducted an economic evaluation to estimate the cost effectiveness and return on investment ROI of the telemedicine program that provides consultations to acutely ill and injured children presenting to rural EDs We conducted these analyses comparing the telemedicine model of care to telephone consultations the current standard of care from a health care system perspective We found that the average cost for a telemedicine consultation was 3 238 per child ED year in 2009 US dollars Telemedicine consultations resulted in 31% fewer patient transfers compared to telephone consultations resulting in a cost reduction of 4 146 per child ED year Our probabilistic CEA demonstrated that telemedicine consultations were less costly than telephone consultations in

53% of simulation iterations The ROI was calculated to be 1 28 4 146 3 238 from the base case analysis and estimated to be 1 46 from the probabilistic analysis suggesting a 1 46 return for each dollar invested in telemedicine Treating ten acutely ill and injured children at each rural ED with telemedicine resulted in an annual cost savings of 41 460 per ED In conclusion the findings from these studies significantly contribute to current knowledge of pediatric telemedicine in both urban and rural hospital settings The results demonstrate that the use of telemedicine in pediatric care not only help improve pediatric patients quality of care but also help reduce disparities in access to specialist physicians for acutely ill and injured children in rural areas Moreover our study findings in economic evaluation have important implications for clinicians health administrators and policy makers considering implementing similar telemedicine care models for children living in rural communities *Iowa Medicaid Telemedicine Pilot Project Start-up Evaluation Report* ,1998
