Essential App Engine Adriaan de Jonge, 2012

In **Essential App Engine** Adriaan de Jonge shows Java developers how to rapidly build complex production-quality performance driven cloud applications with Google App Engine. Using a start to finish case study and extensive Java example code, De Jonge covers the entire lifecycle from application design and data modeling through security, testing and deployment. De Jonge introduces breakthrough techniques for creating applications that respond within two seconds even on cold startup and allow server responses in hundreds of milliseconds or less throughout the rest of the session. He also demonstrates how to avoid common mistakes that can dramatically reduce cloud application performance and scalability. He thoroughly covers state of the art user interface development and shows how to make the most of Google App Engine's extensive set of APIs. Coverage includes:

- Setting up a development environment that makes it easy to continually address performance.
- Understanding the anatomy of a Google App Engine application.
- Making the right technical setup and design choices for each new application.
