Dot PUBLICATIONS, 2017-09-17 Temporomandibular joint dysfunction TMD TMJD is an umbrella term covering pain and dysfunction of the muscles of mastication the muscles that move the jaw and the temporomandibular joints the joints which connect the mandible to the skull The most important feature is pain followed by restricted mandibular movement and noises from the temporomandibular joints TMJ during jaw movement Although TMD is not life threatening it can be detrimental to quality of life because the symptoms can become chronic and difficult to manage TMD is a symptom complex rather than a single condition and it is thought to be caused by multiple factors However these

factors are poorly understood and there is disagreement as to their relative importance. There are many treatments available although there is a general lack of evidence for any treatment in TMJD and no widely accepted treatment protocol.
