

## 24 Applied genetics – answers

- (a) The plant breeder would pollinate plant A with pollen from plant B (or vice versa). The gametes would be (A) HsHs, (B) hShS. When the gametes combined in the zygote, the seeds would all have the HhSs genotype. Since H and S are the dominant alleles, the plants would all be high-yielding, short-stemmed varieties (the F<sub>1</sub> variety).  
 (b) When the HhSs variety produces gametes, these could be HS, Hs, hS or hs which, when combined in the zygote, could produce four varieties of offspring: some of which might be short-stemmed / high yield; short-stemmed / low yield; long-stemmed / low yield, or long-stemmed / low yield.
- In genetic engineering, a gene (A) from one organism is introduced into the genome (B) of an unrelated organism.
- An enzyme which is used to cut DNA at specific sites is called a *restriction enzyme*.
- The cell structures in bacteria which carry genes intended for genetic engineering are called *plasmids*.
- Useful products of genetic engineering are *clotting factor*, *Alpha-anti-trypsin*, *hepatitis B vaccine*, and *insulin* (any three).
- The gene for insulin is 'cut' from the appropriate strand of DNA using restriction enzymes. Plasmids are extracted from bacterial cells and 'opened up' using the same restriction enzymes and the insulin gene is inserted in the gap. The recombinant plasmids are inserted into bacteria which then produce insulin.
- Genetic engineering of crop plants can improve resistance to pests, retard ripening, improve uptake of ions from the soil, increase the vitamin content of the crop. In the future, genetic engineering might improve drought resistance and salt tolerance.
- (a) DNA fragments, in solution, are placed at one end of a sheet of gel and an electric current is applied which separates the fragments.  
 (b) The size of the fragments determines how rapidly they move through the gel. Smaller fragments travel faster and further than larger fragments.
- (a) Suspect S3 is the most likely to be guilty.  
 (b) The greatest correspondence in the position of the bands at the crime scene is with those of suspect (not all the relevant lines are drawn here):
