Christopher Diller, Stewart Pursley, Richard Gentry, 2022 In 2018 Spotify started selling its shares publicly on the New York Stock Exchange The Swedish based start up that launched in 2008 was on its way to becoming the largest music streaming platform in the world At the time it was going public Spotify was used in 61 countries had 159 million active users and hosted a music library of 35 million songs Over the last decade Spotify has focused on increasing its music library available to stream and differentiating its brand from competitors by adding music videos live clips and podcasts to its service It has created a series of personalized playlists based on users preferences and song history It has also begun hosting live events

All of these offerings have added to its popularity and brand loyalty from its streamers. However, one segment that Spotify has not tapped into, an area that its competitors already dominate, is the voice assistant speaker system market. Reports have shown that Spotify is looking to add voice assistant capabilities to its platform and is currently considering the development of a proprietary smart speaker device. By 2017, the voice assistant speaker market had become a global phenomenon valued at USD 4.4 billion and is projected to reach USD 23.3 billion by 2025. Spotify has been focused on maintaining its lead in music streaming, but now smart speaker manufacturing companies will be able to disintermediate Spotify as a non-essential application, breaking its connection to customers. But with the current success of Spotify's music streaming platform and its competitors focused on the smart speaker segment that Spotify has no control over, Spotify must decide whether or not to follow the first movers and enter the voice assistant speaker market.
