Control over Administration Patrick O'Brien, 2022-04-27 The US Constitution recognizes the president as the sole legal head of the executive branch. Despite this constitutional authority, the president's actual control over administration varies significantly in practice from one president to the next. Presidential Control over Administration provides a new approach for studying the presidency and policymaking that centers on this critical and often overlooked historical variable. To explain the different configurations of presidential control over administration that recur throughout history, collapse, innovation, stabilization, and constraint, O'Brien develops a new theory that incorporates historical variation in a combination of key restrictions such as time, knowledge, and the structure of government, as well as key incentives such as providing acceptable performance and implementing preferred policies. O'Brien then tests the argument by tracing the policymaking process in the domain of public finance across nearly a century of history, beginning with President Herbert Hoover during the Great Depression and ending with the first two years of the Trump presidency. Although the book focuses on historical variation in presidential control, especially during the New Deal era and the Reagan era, the theory and empirical analysis are highly relevant for recent incumbents. In particular, O'Brien shows that during the Great Recession and beyond, the initial efforts of Presidents Barack Obama and Donald Trump to change the established course during a period of unified party control of the government were largely undercut by each president's limited control over administration. Presidential Control over Administration is a groundbreaking contribution to our understanding of the presidency and policymaking.

The Optimal Two-bracket Linear Income Tax Joel Slemrod, Shlomo Yitzhaki, Joram Mayshar, 1991 We investigate the optimal rate structure of an income tax system that is constrained to have only two brackets plus a demogrant. We find that in a two-class economy, Pareto-efficient tax schedules feature at least one marginal tax rate equal to zero, and that the marginal tax rate may be increasing or declining. We next use numerical optimization techniques to study the optimal structure of such a tax system in a multi-person model that is a stylized version of an actual economy. We discover that in all cases, the tax rate in the second, higher bracket is less than the tax rate that applies to the first bracket, but that progressivity in the sense of a uniformly rising average tax rate generally obtains. Compared to the optimal one-bracket linear tax system, both the highest and lowest income individuals are better off, while a middle range of taxpayers is worse off.
