**Configuration Space Method for Kinematic Design of Mechanisms** Elisha Sacks,Leo Joskowicz,2010 A novel algorithmic approach to mechanism design based on a geometric representation of kinematic function called configuration space partitions This book presents the configuration space method for computer aided design of mechanisms with changing part contacts Configuration space is a complete and compact geometric representation of part motions and part interactions that supports the core mechanism design tasks of analysis synthesis and tolerancing It is the first general algorithmic treatment of the kinematics of higher pairs with changing contacts It will help designers detect and correct design flaws and unexpected kinematic behaviors as demonstrated in the book s four case studies taken from industry After presenting the configuration space framework and algorithms for mechanism kinematics the authors describe algorithms for kinematic analysis tolerancing and synthesis based on configuration spaces The case studies follow illustrating the application of the configuration space method to the analysis and design of automotive micro mechanical and optical mechanisms Appendixes offer a catalog of higher pair mechanisms and a description of HIPAIR an open source C mechanical design system that implements some of the configuration space methods described in the book including configuration space visualization and
