

# What are neural networks

- Neural networks use many nodes (neurons) connected by edges (axons, dendrites) to transform an input into a desired output
- The neurons and their edges are adjusted, frequently using gradual changes to *train* the neural network.
- Neural networks can be trained many ways
  - Actor / Critic Learning
    - external reinforcement
    - Hebbian Learning (association)
      - Internal reinforcement
    - Linear Algebra (closed form solution)
- We tend to use gradient descent like learning to make incremental changes over time.
- We can introduce Boltzmann like mechanisms in some networks
