Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems. In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other. But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable. In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management. With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly. It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field. This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies. This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors.

Handbook on Enterprise Architecture Peter Bernus, Laszlo Nemes, Günter Schmidt, 2012-12-06 This Handbook is about methods, tools and examples of how to architect an enterprise through considering all life cycle aspects of Enterprise Entities such as individual enterprises, enterprise networks, virtual enterprises, projects and other complex systems including a mixture of automated and human processes. The book is based on ISO15704 2000 or the GERAM Framework Generalised Enterprise Reference Architecture and Methodology that generalises the requirements of Enterprise Reference Architectures. Various Architecture Frameworks PERA, CIMOSA, Grai, GIM, Zachman, C4ISR, DoDAF are shown in light of GERAM to allow a deeper understanding of their contributions and therefore their correct and knowledgeable use. The handbook addresses a wide variety of audience and covers methods and tools necessary to design or redesign enterprises as well as to structure the implementation into manageable projects.

**Handbook of Fuzzy Computation** E Ruspini, P Bonissone, W Pedrycz, 2020-03-05 Initially conceived as a methodology for the representation and manipulation of imprecise and vague information, fuzzy computation has found wide use in problems that fall well beyond its originally intended scope of application. Many scientists and engineers now use the paradigms of fuzzy computation to tackle problems that are either intractable.
