Spatial Microsimulation for Rural Policy Analysis Cathal O'Donoghue, Dimitris Ballas, Graham Clarke, Stephen Hynes, Karyn Morrissey, 2012-10-12 The aim of this book is to explore the challenges facing rural communities and economies and to demonstrate the potential of spatial microsimulation for policy and analysis in a rural context This is done by providing a comprehensive overview of a particular spatial microsimulation model called SMILE Simulation Model of the Irish Local Economy The model has been developed over a ten year period for applied policy analysis in Ireland which is seen as an ideal study area given its large percentage of population living in rural areas The book reviews the policy context and the state of the art in spatial microsimulation against which SMILE was developed describes in detail its model design and calibration and presents example of outputs showing what new information the model provides using a spatial matching process The second part of the book explores a series of rural issues or problems including the impacts of new or changing government or EU policies and examines the contribution that spatial microsimulation can provide in each area Farm-Level

Social Sciences offers a uniquely social science approach on the theory and application of GIS with a range of modern examples It explores how human geography can engage with a variety of important policy issues through linking together GIS and spatial analysis and demonstrates the importance of applied GIS and spatial analysis for solving real world problems in both the public and private sector The book introduces basic theoretical material from a social science perspective and discusses how data are handled in GIS what the standard commands within GIS packages are and what they can offer in terms of spatial analysis It covers the range of applications for which GIS has been primarily used in the social sciences offering a global perspective of examples at a range of spatial scales The book explores the use of GIS in crime health education retail location urban planning transport geodemographics emergency planning and poverty income inequalities It is supplemented with practical activities and datasets that are linked to the content of each chapter and provided on an eResource page The examples are written using ArcMap to show how the user can access data and put the theory in the textbook to applied use using proprietary GIS software This book serves as a useful guide to a social science approach to GIS techniques and applications It provides a range of modern applications of GIS with associated practicals to work through and demonstrates how researcher and policy makers alike can use GIS to plan services more effectively It will prove to be of great interest to geographers as well as the broader social sciences such as sociology crime science health business and marketing Alternative Functions of Grassland European Grassland Federation.
