Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition this book is original in its
construction and its success in the French market demonstrates its appeal It is based on three principles 1 An organization of
the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted
only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family
of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two
pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each
problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the
design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the
book is devoted to the detailed rational construction of the solutions Applications Programming in ANSI C Richard
Johnsonbaugh, Martin Kalin, 1996 Appropriate for a one term course focusing on C as a language for applications
