

**EXERCISE 10(A)**
**PAGE NO: 239**
**Question: 1**

By using a compass needle describe how can you demonstrate that there is a magnetic field around a current carrying conductor.

**Solution:**

Experiment: Figure shows a wire AB, lying in the north-south direction connected to a battery through a rheostat and a tapping key. Just below the wire, a compass needle is placed.

**Observations:**

(1) The needle shows no deflection, when the key is open i.e., no current passes through the wire and it points in the N-S direction (i.e., the earth's magnetic field). In this position, the needle is parallel to the wire as shown in figure (a).

(a) When a key is open, the needle shows no deflection and it point in the N-S direction

(2) A current passes in the wire in the direction from A to B when the key is pressed (i.e., from south to north) and the north pole (N) of the needle deflects towards the west as shown in figure (b).

(b) When the key is pressed, the north pole (N) of the needle deflects towards the west.

(3) North pole (N) of the needle deflects towards the east, when the direction of current in the wire is reversed by reversing the connections at the terminals of the battery as shown

## **Solution Manual Of Concise Physics:**

*Electrodynamics* Carolina C. Ilie, Zachariah S. Schrecengost, 2018-05-29 This book of problems and solutions is a natural continuation of Ilie and Schrecengost's first book *Electromagnetism Problems and Solutions*. As with the first book this book is written for junior or senior undergraduate students and for graduate students who may have not studied electrodynamics yet and who may want to work on more problems and have an immediate feedback while studying. This book of problems and solutions is a companion for the student who would like to work independently on more electrodynamics problems in order to deepen their understanding and problem solving skills and perhaps prepare for graduate school. This book discusses main concepts and techniques related to Maxwell's equations, conservation laws, electromagnetic waves, potentials and fields and radiation.

**GAS DYNAMICS, Seventh Edition** RATHAKRISHNAN, E., 2020-07-01 This revised and updated seventh edition continues to provide the most accessible and readable approach to the study of all the vital topics and issues associated with gas dynamic processes. At every stage the physics governing the process, its applications and limitations are discussed in detail. With a strong emphasis on the basic concepts and problem solving skills this text is suitable for a course on Gas Dynamics, Compressible Flows, High speed Aerodynamics at both undergraduate and postgraduate levels in aerospace engineering, mechanical engineering, chemical engineering and applied physics. The elegant and concise style of the book along with illustrations and worked out examples makes it eminently suitable for self study by students and also for scientists and engineers working in the field of gas dynamics in industries and research laboratories. The computer program to calculate the coordinates of contoured nozzle with the method of characteristics has been given in C language. The program listing along with a sample output is given in the Appendix. NEW TO THE EDITION: A new chapter on the Power of Compressible Bernoulli Equation, Extra chapter end examples in Chapter 5, Additional exercise problems in Chapters 5, 6, 7 and 8. KEY FEATURES: Concise coverage of the thermodynamic concepts to serve as a revision of the background material, Introduction to measurements in compressible flows and optical flow visualization techniques, Introduction to rarefied gas dynamics and high temperature gas dynamics, Solutions Manual for instructors containing the complete worked out solutions to chapter end problems, In depth presentation of potential equations for compressible flows, similarity rule and two dimensional compressible flows, Logical and systematic treatment of fundamental aspects of gas dynamics, waves in the supersonic regime and gas dynamic processes.
