Higher Engineering Mathematics John Bird,2020-08-31 In this edition the material has been ordered into the following twelve convenient categories number and algebra geometry and trigonometry numbers matrices and determinants vector geometry differential calculus integral calculus differential equations statistics and probability Laplace transforms and Fourier series New material has been added on logarithms and exponential functions binary octal and hexadecimal vectors and methods of adding alternating waveforms Another feature is that a free Internet download is available of a sample over 1100 of the further problems contained in the book The primary aim of the material in this text is to provide the fundamental analytical and underpinning knowledge and techniques needed to successfully complete scientific and engineering principles modules of Degree Foundation Degree and Higher National Engineering programmes The material

has been designed to enable students to use techniques learned for the analysis modelling and solution of realistic engineering problems at Degree and Higher National level. It also aims to provide some of the more advanced knowledge required for those wishing to pursue careers in mechanical engineering, aeronautical engineering, electronics, communications engineering, systems engineering and all variants of control engineering. In *Higher Engineering Mathematics 6th Edition*, the theory is introduced in each chapter by a full outline of essential definitions, formulae, laws, procedures etc. The theory is kept to a minimum for problem solving; is extensively used to establish and exemplify the theory. It is intended that readers will gain real understanding through seeing problems solved and then through solving similar problems themselves. Access to software packages such as Maple, Mathematica and Derive or a graphics calculator will enhance understanding of some of the topics in this text. Each topic considered in the text is presented in a way that assumes in the reader only knowledge attained in BTEC National Certificate Diploma or similar in an Engineering discipline. *Higher Engineering Mathematics 6th Edition* provides a follow up to *Engineering Mathematics 6th Edition*. This textbook contains some 900 worked problems followed by over 1760 further problems with answers arranged within 238 Exercises. Some 432 line diagrams further enhance understanding. A sample of worked solutions to over 1100 of the further problems has been prepared and can be accessed free via the Internet (see next page). At the end of the text, a list of Essential Formulae is included for convenience of reference. At intervals throughout the text are some 19 Revision Tests plus two more in the website chapters to check understanding. For example, Revision Test 1 covers the material in Chapters 1 to 4, Revision Test 2 covers the material in Chapters 5 to 7, Revision Test 3 covers the material in Chapters 8 to 10 and so on. An Instructor's Manual containing full solutions to the Revision Tests is available free to lecturers adopting this text (see next page). Due to restriction of extent, five chapters that appeared in the fifth edition have been removed from the text and placed on the website. For chapters on Inequalities, Boolean algebra and logic circuits, Sampling and estimation theories, Significance testing and Chi square and distribution free tests (see next page). Learning by example is at the heart of *Higher Engineering Mathematics 6th Edition*. *Higher Engineering Mathematics* J. O. Bird, 1999. Includes over 800 worked examples and 1500 problems. John Bird's approach based on numerous worked examples supported by problems is ideal for students from a wide range of academic backgrounds and can be worked through at the student's own pace. This has been proved by the thousands of students guided to exam success by previous editions of this book and the highly popular companion title *Engineering Mathematics*. A wide and thorough topic coverage makes this an ideal text for a wide range of degree modules and institution devised HNC/D units. However, it has been written to match specifically the final specifications of the set units from Edexcel for the new Higher National scheme: Analytical Methods for Engineers core unit 21717P, Further Analytical Methods for Engineers 21775P, Engineering Mathematics 21766P. It is also suitable for the phase 1 Higher National units 9500M, 9529M. ADOPTING LECTURERS: Lecturers adopting *Higher Engineering Mathematics* as their main course text can obtain a free 150
