

# TEST AND COMMISSIONING MANUAL

Refer to the Substation Controlled Drawings- 1 - 28468627 and associated Substation Controlled Drawings Quick Reference Guide - 2913527 for details of the drawing management process.

The Greenlining and Bluellining of E.ON Energy Substation Drawings - 28976558 describes how continuity and functional testing is carried out during the testing and commissioning process.

Note that:

- Greenlining is carried out on the Greenlining Test Copy (Drawing Set 8). Each workgroup must use a different colour highlighter from the previous workgroup when doing continuity testing, and clearly identify on the first drawing of the set which colour belongs to them. Green is always reserved for the first workgroup.
- Bluellining is carried out on the Bluellining Test Copy (Drawing Set 12). Each workgroup must use a different colour highlighter from the previous workgroup when doing functional testing, and clearly identify on the first drawing of the set which colour belongs to them. Blue is always reserved for the last (SIT) workgroup.

Drawing Sets 1 (Master Copy), 8 and 12 are not "owned" by any one workgroup - the workgroup doing the relevant work is the temporary custodian before passing the drawings on to the next workgroup. If another workgroup has the drawing set you need, it is still your responsibility to transfer the relevant mark-ups / Greenlining / Bluellining to the correct set when you receive it. Drawing sets shall not be split up between different workgroups because of the risk of losing drawings or making errors in version control.

It is the responsibility of the Officer Responsible for Testing to ensure that all mark-ups recorded on the "Bluellining Test Copy" (Drawing Set 12) are transferred to the "Site Initial Record Copy" (Drawing Set 13) and the "Master Copy" (Drawing Set 1) prior to returning the drawings to the Project Manager.

The "Site Initial Record Copy" (Drawing Set 13) will be retained on site with all mark-ups for use as the site copy until it is replaced with "Substation As Constructed" (Drawing Set 20) copy. The "Site Initial Record Copy" will not be used for capturing testing progress.

When on site, test and commissioning activities have been completed the "Bluellining Test Copy" will be retained by the local test section such that they can perform operational response duties. The "Bluellining Test Copy" will be retained by the local test section until the "Test Section As Constructed" copy (Drawing Set 21) are issued to the test section.

## 9. SUBMISSION OF APPLICATION FOR WORK REQUESTS AND SYSTEM OUTAGES

The Commissioning Officer is accountable for tentatively entering AFWs relating to integration and testing activities in the E.ON Energy FeederSTAT system. The Commissioning Officer should be recorded as the AFW applicant (to ensure they are automatically notified of any changes to or the rejection of the AFW). It will be the responsibility of the supervisor of crews working under the AFW to review the AFW to ensure it is suitable for the work being undertaken. Where contractors are working under the AFW, the Contracts Officer / Project Delivery Co-ordinator is required to review the AFW to ensure it is suitable for the work being undertaken.

Where planned field crews performing the work change due to unforeseen circumstances it is the responsibility of the supervisor to ensure that newly appointed staff are provided sufficient time to review and familiarise themselves with the AFW details.

The Commissioning Officer will provide ongoing support as required to ensure that the co-ordination of multiple work groups is correctly reflected in the AFW.

*Electric Power Substations Engineering* John D. McDonald, 2017-12-19 The use of electric power substations in generation transmission and distribution remains one of the most challenging and exciting areas of electric power engineering. Recent technological developments have had a tremendous impact on all aspects of substation design and operation. With 80% of its chapters completely revised and two brand new chapters on energy storage and Smart Grids, *Electric Power Substations Engineering* Third Edition provides an extensive updated overview of substations serving as a reference and guide for both industry and academia. Contributors have written each chapter with detailed design information for electric power engineering professionals and other engineering professionals e.g. mechanical, civil who want an overview or specific information on this challenging and important area. This book emphasizes the practical application of the technology. It includes extensive use of graphics and photographs to visually convey the book's concepts. Provides applicable IEEE industry standards in each chapter. It is written by industry experts who have an average of 25 to 30 years of industry experience. Presents a new chapter addressing the key role of the substation in Smart Grids. Editor: John McDonald and this very impressive group of contributors cover all aspects of substations from the initial concept through design, automation and operation. The book's chapters, which delve into physical and cyber security, commissioning and energy storage, are written as tutorials and provide references for further reading and study. As with the other volumes in the *Electric Power Engineering Handbook* series, this book supplies a high level of detail and more importantly a tutorial style of writing and use of photographs and graphics to help the reader understand the material. Several chapter authors are members of the IEEE Power Energy Society PES Substations Committee and are the actual experts who are developing the standards that govern all aspects of substations. As a result, this book contains the most recent technological developments in industry practice and standards. Watch John D. McDonald talk about his book.
