**Seller Reputation** Luís M. B. Cabral, Ali Hortaçsu,2004 We propose a basic theoretical model of eBay's reputation mechanism derive a series of implications and empirically test their validity Our theoretical model features both adverse selection and moral hazard We show that when a seller receives a negative rating for the first time his reputation decreases and so does his effort level This implies a decline in sales and price and an increase in the rate of arrival of subsequent negative feedback Our model also suggests that sellers with worse records are more likely to exit and possibly re enter under a new identity whereas better sellers have more to gain from buying a reputation by building up a record of favorable feedback through purchases rather than sales Our empirical evidence based on a panel data set of seller feedback histories and cross sectional data on transaction prices collected from eBay is broadly consistent with all of these predictions An important conclusion of our results is that eBay's reputation system gives way to strategic responses from both buyers and sellers     Symposium ,2008     The Internet Laura Lambert,2005     **Book Review Digest** ,2002
