Comparative Anatomy Dale W. Fishbeck, Aurora M. Sebastiani, 2001 **The Dissection of Vertebrates** Gerardo De Iuliis, Dino Pulerà, 2006-08-03 The Dissection of Vertebrates Second Edition provides students with a manual that combines pedagogical effective text with high quality accurate and attractive visual references. Using a systemic approach within a systematic framework for each vertebrate, this book covers several animals commonly used in providing an anatomical transition sequence. Seven animals are covered: lamprey, shark, perch, mudpuppy, frog, pigeon, and cat. This updated version includes a revised systemic section of the introductory chapter, corrections to several parts of the existing text, and new comparative skull sections included as part of the existing vertebrates and a companion site with image bank. This text is designed for 2nd or 3rd year university level comparative vertebrate anatomy courses. Such courses are usually two semester courses and may either be a required course or an elective. It is typically a required course for Biology and Zoology majors as well as for some Forensics and Criminology programs and offered as an elective for many other non zoology science majors. Winner of the NYSM Jury award for the Rock Dove Air Sacs Lateral and Ventral Views illustration. Expertly rendered award winning illustrations accompany the detailed clear dissection direction. Organized by individual organism to facilitate classroom presentation. Offers coverage of a wide range of vertebrates. Full color strong pedagogical aids in a convenient lay flat presentation. Expanded and updated features on phylogenetic coverage, mudpuppy musculature, and comparative mammalian skulls.
