

Veterinary Virology Lecture 1 – Introduction

Learning Objectives

Describe the characteristics shared by all viruses

Define the terminology used in virology (capsid, capsomere, envelope, virion, peplomere, defective virus (Lecture 4), nucleic acid, arboviruses and prions)

Describe the different morphologies of viruses

Identify the different families of DNA and RNA viruses

Discuss the different chemical components of a virus and their functions

- Nucleic acid content and structure

- Viral proteins and enzymes

- Lipids and carbohydrates

Know the nomenclature and the basis of taxonomy of viruses

NOTES

Characteristic of viruses

Smallest infectious agents (20-300nm in diameter)

Filterable agents – when compared to bacteria

RNA or DNA surrounded by a protective protein shell (capsid) or protein + lipid envelope

Obligate intracellular parasites

Unique way of replication – programs infected cell to synthesize virus specific macromolecules (rely on the infected cell for energy too)

Virion Structure

Helical structure – spiral shaped

Complex symmetry – brick shaped

Binal Symmetry – icosahedral head and helical tail

Viral Envelope

Viruses may mature by budding through a membrane and acquiring a lipid envelope of host origin

Viral glycoproteins embedded in envelope important for virus/host interaction

Large viral envelope glycoproteins may be referred to as spikes of peplomers

Envelope necessary for infectivity

Viral Nucleic Acid

May be DNA or RNA and positive or negative

RNA – single molecule or segmented

Considerable variation in the way that viral nucleic acid is transcribed into mRNA and translated into protein

Genomes are haploid (except retroviruses)

Variable length

Viral Proteins

Can be 2-100 viral proteins (depending on virus complexity)

Structural (incorporated into virions) or non-structural (enzymes)

Envelope proteins – glycoproteins

Functions of Viral Proteins

Structural

- Protect genome against inactivation by nucleases

- Assist with attachment

- Act as Aps

- Give structural symmetry

Internal/non-structural
