

#### ROLLING ELEMENT BEARING FAILURE MODES

Rolling element bearings are subject to a wide range of failure modes. The most common failure mode is fatigue, which is caused by the repeated loading and unloading of the bearing surfaces. Other failure modes include corrosion, misalignment, and lubrication failure.

Rolling element bearings can be classified into two main types: deep groove ball bearings and tapered roller bearings. Each type has its own set of failure modes and symptoms.

Rolling element bearings can be inspected visually for signs of failure. Common signs include discoloration, pitting, and scoring. More advanced inspection techniques, such as vibration analysis, can also be used to detect bearing failure.

Rolling element bearings can be inspected using a variety of methods. Visual inspection is the most common method, but it can only detect surface defects. More advanced methods, such as vibration analysis, can detect internal defects.
