**Heat Pump Systems with Vertical Ground Heat Exchanger and Uncovered Solar Thermal Collectors** Bertram, Erik, 2015      **Design for Micro-Combined Cooling, Heating and Power Systems** Nicolae Badea, 2014-09-25 This book provides a manual for the technical and structural design of systems for supplying decentralised energy in residential buildings. It presents the micro combined cooling heating components that constitute these systems and advanced algorithms for achieving the structural and technical design of such systems. In residential buildings satisfying demands of durable development has gradually evolved from necessity to obligation and institutionalisation. Consequently a major paradigm change has appeared in the supply of energy to residential buildings from the centralised production of energy using fossil fuels to the decentralised production of energy using local renewable sources. Furthermore on the energy system market energy micro systems which use renewable energy sources are increasingly commercialised. From among these the mCCHP SE RES systems are particularly striking because they offer a high performance and they enhance the relationship between humans and the environment. This book is intended for postgraduate students of electrical engineering applied mathematicians and researchers of modelling and control of complex systems or power system technologies.      Domestic Microgeneration Iain Staffell, Daniel J.L. Brett, Nigel P. Brandon, Adam D. Hawkes, 2015-06-19 Microgeneration producing energy for the home in the home is a substantial improvement over the current centralised and detached energy model employed the world over. Domestic Microgeneration is the first in depth reference work for this exciting and emerging field of energy generation. It provides detailed reviews of ten state of the art technologies including solar PV and thermal micro CHP and heat pumps and considers them within the wider context of the home in which they are installed and the way that they are operated. Alongside the many successes this book highlights the common pitfalls that beset the industry. It offers best practice guidance on how they can be avoided by considering the complex linkages between technology user installer and government. This interdisciplinary work draws together the social economic political and environmental aspects of this very diverse energy genre into a single must have reference for academics and students of sustainability and energy related subjects industry professionals policy makers and the growing number of energy literate householders who are looking for ways to minimise their environmental footprint and their energy bills with microgeneration.      **Advances in Building Services Engineering** Ioan Sarbu, 2021-01-04 This book provides a comprehensive systematic overview of original theoretical experimental and numerical studies in the building services engineering domain. It brings together different strands of the topic guided by the two key features of energy savings and reduction of the pollutant emissions. Technical economic and energy efficiency aspects related to the design modelling optimisation and operation of diverse building services systems are explored. This book includes various theoretical studies numerical and optimisation models experiments and applications in this field giving an emphasis to indoor environment quality assurance energy analysis modelling and
