Exercises in Modules and Rings T.Y. Lam,2009-12-08 The idea of writing this book came roughly at the time of publication of my graduate text Lectures on Modules and Rings Springer GTM Vol 189 1999 Since that time teaching obligations and intermittent intervention of other projects caused prolonged delays in the work on this volume Only a lucky break in my schedule in 2006 enabled me to put the finishing touches on the completion of this long overdue book This book is intended to serve a dual purpose First it is designed as a problem book for Lectures As such it contains the statements and full solutions of the many exercises that appeared in Lectures Second this book is also offered as a reference and repository for general information in the theory of modules and rings that may be hard to find in the standard textbooks in the field As a companion volume to Lectures this work covers the same mathematical material as its parent work namely the part of ring theory that makes substantial use of the notion of modules The two books thus share the same table of contents with the first half treating projective injective and flat modules homological and uniform dimensions and the second half dealing with noncommutative localizations and Goldie s theorems maximal rings of quotients Frobenius and quasi Frobenius rings concluding with Morita s theory of category equivalences and dualities

Visual Methods for Digital Research Sabine Niederer,Gabriele Colombo,2024-06-19 Over the last decade images have become a key feature of digital culture at the same time they have made a mark on a wide range of research practices Visual Methods for Digital Research is the first textbook to bring the fields of visual methods and digital research together Presenting visual methods for digital and participatory research the book covers both the application of existing digital methods for image research and new visual methodologies developed specifically for digital research It encompasses various approaches to studying digital images including the distant reading of image collections the close reading of visual vernaculars of social media platforms and participatory research with visual materials Offering a theoretical framework illustrated with hands on techniques Sabine Niederer and Gabriele Colombo provide compelling examples for studying online images through visual and digital means and discuss critical data practices such as data feminism and digital methods for social and cultural research This textbook is an accessible and invaluable guide for students and researchers of digital humanities social sciences information

Generative Systems and Intelligent Tutoring Systems Sabine Graf, Angelos Markos, 2025-07-28 This book constitutes the refereed proceedings of the 21st International Conference on Intelligent Tutoring Systems ITS 2025 held in Alexandroupolis Greece during June 2-6 2025. The 21 full papers, 27 short papers and 5 posters included in this book were carefully reviewed and selected from 67 submissions. The papers are organized in the following topical conference tracks: Part I: Generative Tutoring Systems. The goal of this part is to show how new techniques inspired by artificial intelligence (AI) and new methods in education can improve learning, teaching and generate the capacity for knowledge acquisition and much more. Part II: Application areas, environments and techniques for AI systems. This part shows the progress of research investigating the different application areas such as education, health, techniques such as neural networks, data mining, natural language processing and environments such as games, virtual reality, cognitive robots for effective AI systems.

Illinois Journal of Mathematics, 1978 *Discovering Discrete Dynamical Systems* Aimee Johnson, Kathleen Madden, Ayse Sahin, 2017-12-31 *Discovering Discrete Dynamical Systems* is a mathematics textbook designed for use in a student-led inquiry-based course for advanced mathematics majors. Fourteen modules, each with an opening exploration, a short exposition and related exercises, and a concluding project guide students to self-discovery on topics such as fixed points and their classifications, chaos and fractals, Julia and Mandelbrot sets in the complex plane and symbolic dynamics. Topics have been carefully chosen as a means for developing student persistence and skill in exploration, conjecture and generalization while at the same time providing a coherent introduction to the fundamentals of discrete dynamical systems. This book is written for undergraduate students with the prerequisites for a first analysis course and it can easily be used by any faculty member in a mathematics department regardless of area of expertise. Each module starts with an exploration in which the students are asked an open-ended question. This allows the students to make discoveries which lead them to formulate the questions that will be addressed in the exposition and exercises of the module. The exposition is brief and has been written with the intent that a student who has taken or is ready to take a course in analysis can read the material independently. The exposition concludes with exercises which have been designed to both illustrate and explore in more depth the ideas covered in the exposition. Each module concludes with a project in which students bring the ideas from the module to bear on a more challenging or in-depth problem. A section entitled *To the Instructor* includes suggestions on how to structure a course in order to realize the inquiry-based intent of the book. The book has also been used successfully as the basis for an independent study course and as a supplementary text for an analysis course with traditional content.
