Learning Java Programming in Clara's World Anton Bogdanovych, Tomas Trescak, 2021-06-07

This book introduces the key concepts of Java programming through the eyes of a small ladybug called Clara. Clara is a fun and extremely obedient insect whose journey starts with limited skills. Readers learn programming by making Clara move around and manipulate objects in her world. As the book progresses, Clara becomes more intelligent and acquires new skills and together with readers learns by tackling some of the world's greatest challenges. The book explains programming concepts through real world problems such as launching rockets into space, automatically patching potholes, developing a vacuum cleaner robot, simulating projectile motion, dynamically avoiding obstacles, delivering mail, etc. Every chapter of the book starts by presenting a challenge and then continues to explain new programming concepts with the focus on tackling this challenge. Focusing the new material explanation on these challenges helps to remind the readers of how this material is connected with the problems that they may encounter in the real world and makes it easier to relate to. You can explore all programming challenges presented in this book on the Clara's World website. Every programming problem covered in the book has a corresponding link to a problem template for those readers willing to attempt the problem themselves, the link to the solution of this problem and a video recording of us solving this problem step by step. In addition, at the end of each chapter there is a link to fun exercises that readers are recommended to complete.

The Business of iPhone App Development Dave Wooldridge, Michael Schneider, 2010-08-26 The phenomenal success of the iPhone and the iPod touch has ushered in a gold rush for developers but with well over 100 000 apps in the highly competitive App Store it has become increasingly difficult for new apps to stand out in the crowd. Achieving consumer awareness and sales longevity for your iPhone app requires a lot of organization and some strategic planning. This book will show you how to incorporate marketing and business savvy into every aspect of the design and development process giving your app the best possible chance of succeeding in the App Store. The Business of iPhone App Development was written by experienced developers with business backgrounds taking you step by step through cost effective marketing techniques that have proven successful for professional iPhone app creators perfect for independent developers on shoestring budgets. No prior business knowledge is required. This is the book you wish you had read before you launched your first app.

Applied Mathematics by Example: Exercises, *Smart People Don't Diet* Charlotte N. Markey, 2015-02-11 Being on a diet is a miserable experience for most people and it rarely leads to the desired goal of shedding fat. In fact studies show that dieters often gain weight rather than lose it because the intensity restrictions and short duration of most diets means they are ill equipped to produce long term effects. In *Smart People Don't Diet* Dr Charlotte N Markey presents a refreshingly different perspective addressing the underlying causes of weight gain and offering proven strategies for lasting weight management. This book will show you how to eat well, lose weight and keep it off without dieting. The gimmicks don't work but Dr Markey's reasonable, accessible advice will help you get and stay healthy.

Surfer, 2005 **Handbook of Intervention and Alzheimer's Disease** Yue Leng, J. Wesson Ashford, Dharma Singh Khalsa, 2024-02-15 It is almost 120 years since Alzheimer's disease (AD) was first reported and the concept of managing some of the modifiable risk factors associated with the disease has been present from the outset. Intervening to manage risk factors as a way of tackling AD is not new but optimizing brain health as a way of minimizing risk and maximizing the potential benefits of revolutionary new treatments for AD is becoming increasingly important. This book, the *Handbook of Intervention and Alzheimer's Disease*, presents 47 papers exploring factors which may either inspire or inform future treatment and clinical trials. While novel interventions such as anti amyloid immunotherapy present great opportunities they may also increase the risk of brain bleeds and edema which in turn may lead to adverse clinical outcomes. Such adverse outcomes are demonstrably more likely to occur in persons with poor brain health so improved management of the risk factors which make up the AD preventome will also minimize the risks associated with such novel therapies. The papers in this volume can therefore be thought of as offering insight into those factors that can optimize brain health or providing key insights into interventions which may achieve such outcomes. Together with its companion volume on prevention the book provides a comprehensive overview of strategies for tackling Alzheimer's disease and will be of interest to all those working in the field. Cover illustration: Improved hypoperfusion (red colors) on ASL MRI Z score maps superimposed on structural MRI scans at baseline and one year in a PET amyloid positive research participant with cognitive complaints undergoing one year of multi-domain personalized brain health interventions: vascular disease management, dietary optimization, sustained physical activity, etc. Permission to use this figure was granted both by the study PI Dr David Merrill MD PhD of the Pacific Neuroscience Institute and the research participant.
