IR **Data Mining and Exploration** Chong Ho Alex Yu,2022-10-27 This book introduces both conceptual and procedural aspects of cutting edge data science methods such as dynamic data visualization artificial neural networks ensemble methods and text mining There are at least two unique elements that can set the book apart from its rivals First most students in social sciences engineering and business took at least one class in introductory statistics before learning data science However usually these courses do not discuss the similarities and differences between traditional statistics and modern data

science as a result learners are disoriented by this seemingly drastic paradigm shift In reaction some traditionalists reject data science altogether while some beginning data analysts employ data mining tools as a black box without a comprehensive view of the foundational differences between traditional and modern methods e g dichotomous thinking vs pattern recognition confirmation vs exploration single method vs triangulation single sample vs cross validation etc This book delineates the transition between classical methods and data science e g from p value to Log Worth from resampling to ensemble methods from content analysis to text mining etc Second this book aims to widen the learner s horizon by covering a plethora of software tools When a technician has a hammer every problem seems to be a nail By the same token many textbooks focus on a single software package only and consequently the learner tends to fit the problem with the tool but not the other way around To rectify the situation a competent analyst should be equipped with a tool set rather than a single tool For example when the analyst works with crucial data in a highly regulated industry such as pharmaceutical and banking commercial software modules e g SAS are indispensable For a mid size and small company open source packages such as Python would come in handy If the research goal is to create an executive summary quickly the logical choice is rapid model comparison If the analyst would like to explore the data by asking what if questions then dynamic graphing in JMP Pro is a better option This book uses concrete examples to explain the pros and cons of various software applications *Formal Methods. *Quirk's Marketing Research Review, 2007* **Digital Content Marketing in the Global Environment. Evaluation of Global Companies in the Chemical Industry** Matthias Hebbesen, 2021-04-27. Master's Thesis from the year 2019 in the subject Business economics / Business Management / Corporate Governance, grade 2.0. University of Applied Sciences Northwestern Switzerland, language: English. Abstract: This Master thesis explores the phenomenon of Digital Content Marketing (DCM) by evaluating if content marketing and its tools have a positive impact on global companies in the chemical industry. Rapid globalization and the development of new markets at an increasingly global scale have made DCM more important. However, global companies are facing new challenges like new technological developments and trends and a changing consumer landscape that requires new marketing approaches. Strategies are required to overcome these challenges: adopt DCM techniques and use current techniques to gain competitive advantages. However, there are still companies that have not included digital content in their marketing strategy. Others have difficulties making their marketing content unique and powerful. The main issue is often measuring the effectiveness of one's digital content to determine whether DCM has a positive impact.
