The Link, 2004 **Science & Technology Review**, 2012 **The School Science Review**, 2006 **Electronic Scientific, Technical, and Medical Journal Publishing and Its Implications**

National Research Council, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Electronic Scientific, Technical, and Medical Journal Publishing, 2005-05-24. This report is the proceedings of a 2003 symposium on Electronic Scientific, Technical and Medical Journal Publishing and Its Implications, which brought together experts in STM publishing both producers and users of these publications to 1 identify the recent technical changes in publishing and other factors that influence the decisions of journal publishers to produce journals electronically, 2 identify the needs of the scientific, engineering and medical community as users of journals whether electronic or printed, 3 discuss the responses of not for profit and commercial STM publishers and of other stakeholders in the STM community to the opportunities and challenges posed by the shift to electronic publishing and 4 examine the spectrum of proposals that has been put forth to respond to the needs of users as the publishing industry shifts to electronic information production and dissemination.

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services: access and evaluation. The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret. As a result, the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in. Open access is now widely accepted as desirable and is

slowly beginning to become a reality. However the second essential element evaluation has received less attention. Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system. However it is unclear how exactly such a system should be designed. The evaluation system steers the attention of the scientific community and thus the very course of science. For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions. Evaluation therefore is at the heart of the entire endeavor of science. As the number of scientific publications explodes evaluation and selection will only gain importance. A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention. So far scientists have left the design of the evaluation process to journals and publishing companies. However the steering mechanism of science should be designed by scientists. The cognitive, computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations, software design and modeling of the network of scientific papers and their interrelationships. This Research Topic in *Frontiers in Computational Neuroscience* collects visions for a future system of open evaluation. Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems. Design decisions include: Should the reviews and ratings be entirely transparent or should some aspects be kept secret? Should other information such as paper downloads be included in the evaluation? How can scientific objectivity be strengthened and political motivations weakened in the future system? Should the system include signed and authenticated reviews and ratings? Should the evaluation be an ongoing process such that promising papers are more deeply evaluated? How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars? How should the evaluative information about each paper e.g. peer ratings be combined to prioritize the literature? Should different individuals and organizations be able to define their own evaluation formulae e.g. weighting ratings according to different criteria? How can we efficiently transition toward the future system? Ideally the future system will derive its authority from a scientific literature on community based open evaluation. We hope that these papers will provide a starting point.

Bioslurry Lennart De Groot, Anne Bogdanski, 2013. This review attempts to synthesize the findings of the growing peer reviewed literature on bioslurry to provide a sound and scientific basis for bioslurry use. At the same time it sets out to identify the various research gaps related to bioslurry.
