

Removing propeller shafts

- 1 Place the machine in service position, see page 167.
- 2 Release all brakes.
- 3 Remove the propeller shaft bolts and detach the propeller shafts from the drive axles.

After recovering / towing

Before the towbar or wire rope is removed, the following safety measures should be taken:

- 1 If possible place the machine on level ground.
- 2 Block the wheels to prevent the machine from rolling.
- 3 Restore the parking brake, if it has been mechanically released.

NOTE: The parking brake will not work, when the propeller shafts have been disconnected. If the machine is left without having restored the parking brake, this must be indicated by a label on the steering wheel with the information that the parking brake has been disabled.

Releasing parking brake

machinecatalogic.com

Mechanical release of parking brake

If it is not possible to start the engine or for any other reason it is not possible to build up pressure needed to release the parking brake, it is possible to release it mechanically.

NOTE: However, this is only allowed in order to enable towing. Immediately after the towing has been completed, the parking brake must be restored.

**WARNING!**

Always block the wheels before releasing the parking brake to prevent the machine from rolling.

Releasing

- Remove the three plugs according to figure. Oil will leak out.
- Temporarily replace these with three bolts (M10 x 50 mm) and washers (the bolts are included in the tool bag for the machine).
- Tighten the bolts alternately until they bottom.

Restoring

- Unscrew the bolts, one at a time. Some oil will leak out.
- Reinstall the plugs.
- Put the bolts back in the tool bag for the machine.

NOTE: If the machine is left without having restored the parking brake, this must be indicated by a label on the steering wheel with the information that the parking brake has been disabled.

**WARNING!**

Hot oil can cause burns.
