5. Oil pump

The engines are in-line, four-cylinder, four-stroke diesel engines with overhead valves. They are of the direct-injection type and have horizontally-mounted water cooling of the cylinder block and cylinder head.

The engine has wet-sump, replacement cylinder heads and two separate cylinder heads, each of which covers three cylinders. The cylinder heads are directly overhead.

Installation takes place through a hard-hat system where an oil pump delivers oil to all lubricating points.

The turbocharger supplies the engine with fresh air under pressure, providing boost air. This means that the fuel injection quantity can be increased, thereby giving increased engine output. The turbocharger is lubricated and cooled by the engine lubrication oil and is driven by the engine exhaust gases. Beware: not every car of otherwise equal class!
