## Hydraulic system, description

See [999 Hydraulic diagram, complete](#).

The hydraulic system consists of five (1) <sup>①</sup> respectively six (2) <sup>②</sup> hydraulic pumps, piston type pumps with continuously variable displacement. There are two (1) respectively three (2) pumps for the steering and dumping systems, two for fan drive and one ground dependent hydraulic pump on the dropbox. The ground dependent pump delivers oil via a non-return valve to the hydraulic system when the machine is moving forward.

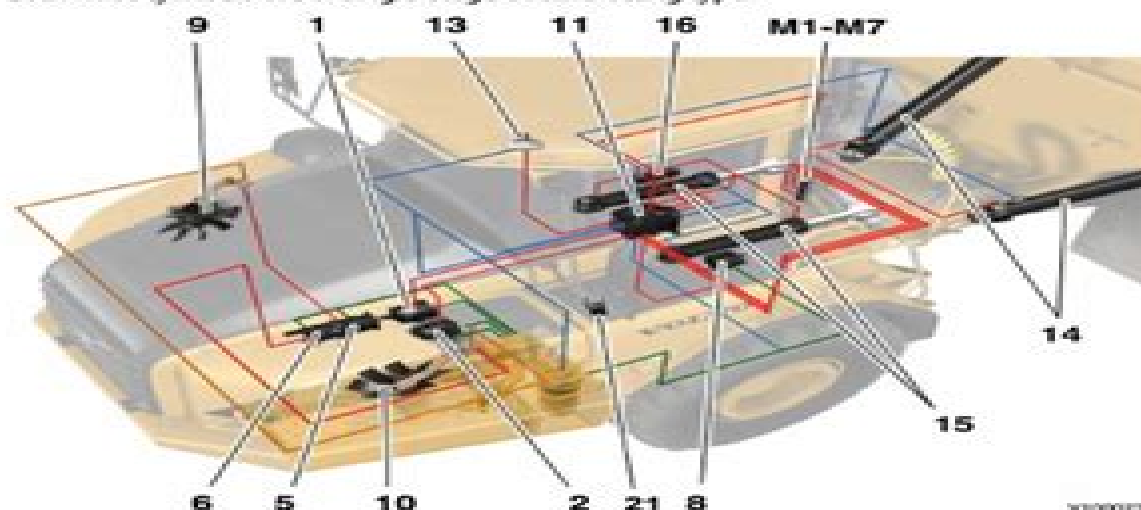

The dumping system is connected in parallel and series with the steering system, and have common hydraulic pumps. However, the steering system has priority over the dumping system to safeguard the steering function at all times. When only dumping, all pumps (except ground dependent pump) provide flow to the dumping system. When steering, a hydraulic pump is connected directly to the steering system, and thus, it is possible to steer and dump at the same time.

Speed control of the fans takes place via a control valve on the pumps, which receives signals from the vehicle electronics. The electronics sense the temperature in the various cooling systems and variably adjusts the fan speed between base speed and max. speed. This is controlled electrically. In case of missing signal from the electronics, the fans are controlled to max. speed. See further in Section 2 and 3.

The dumping system is servo-operated and is controlled with hydraulic oil from the dumping valve. The dump lever has four positions: lower with pressure, lower/float, hold and dump. The lever has fixed positions in lower/float or hold. When the current is cut off or the operator leaves the operator's seat, the lever automatically goes to the hold position. The lever can be locked in the hold position with a lock device.

The dumping valve is a load-sensing 4-way valve. The valve slide has four positions: lower with pressure, lower/float, hold and dump. Operation of the dumping valve can be forced (lower/float position) using an adjusting screw at one end if there is no servo pressure for the dump lever. See [951 Dump body alternative, lowering](#).

Both hoist cylinders are of single-stage double-acting type.
