### Student Name:

Sign languages are the unique and natural form of communication developed by the deaf community, consisting of hearing-impaired people using gestures, facial expressions, and body movements for effective meaning. These languages are different from natural languages and their grammar follows very closely to existing natural languages, consisting of gestures, movements, and body postures.

The history of sign language shows that it existed, though in various other names, and in various regions of the world, much earlier than through documentation of these names. However, written records that could prove the existence of sign languages were not available until the 18th century, when the first written record of sign language was made.

The evolution and development of sign language goes back to the 18th century. French scholars, then known as the "Panthéon" school, started recording the first known documents of sign language. They recorded the first form of the grammar of sign language and the first known sign language dictionary. In 1820, the first sign language dictionary was published in France. This dictionary, though not a complete sign language, was a great breakthrough in sign language history. From there, sign language began to spread throughout the world, gradually.

Learning to interpret different sign languages is not an easy task. Each deaf community develops its own language, including their own grammar. The American Sign Language (ASL) is a language that is used by deaf people in the United States and Canada, and is known for its unique grammar.

The evolution of sign languages is infinite. This is because the knowledge, movements, grammar, and structure, all change in their signs. This results in a sign language to any movement or action that is interpreted and described from the meaning of a sign language in sign language culture in all areas of the world.

### **Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1.** John D.

Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30 Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension memorization and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations. Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism or aphasia, it may also assist the communication needs of a wider audience such as healthcare professionals, aid workers, military personnel, travellers or parents and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike.
