*Simulation and Optimization of Digital Circuits* Vazgen Melikyan, 2018-04-12 This book describes new fuzzy logic based mathematical apparatus which enable readers to work with continuous variables while implementing whole circuit simulations with speed similar to gate level simulators and accuracy similar to circuit level simulators The author demonstrates newly developed principles of digital integrated circuit simulation and optimization that take into consideration various external and internal destabilizing factors influencing the operation of digital ICs The discussion includes factors including radiation ambient temperature electromagnetic fields and climatic conditions as well as non ideality of interconnects and power rails      Noise Analysis of Radio Frequency Circuits Amit Mehrotra, Alberto L.

Sangiovanni-Vincentelli, 2013-04-17 In this book we concentrate on developing noise simulation techniques for RF circuits The difference between our approach of performing noise analysis for RF circuits and the traditional techniques is that we first concentrate on the noise analysis for oscillators instead of non oscillatory circuits As a first step we develop a new quantitative description of the dynamics of stable nonlinear oscillators in presence of deterministic perturbations Unlike previous such attempts this description is not limited to two dimensional system of equations and does not make any assumptions about the type of nonlinearity By considering stochastic perturbations in a stochastic differential calculus setting we obtain a correct mathematical characterization of the noisy oscillator output We present efficient numerical techniques both in time domain and in frequency domain for computing the phase noise of oscillators This approach also determines the relative contribution of the device noise sources to phase noise which is very useful for oscillator design

*Circuits and Systems for Future Generations of Wireless Communications* Aleksandar Tasic, Wouter A. Serdijn, Gianluca Setti, 2009-05-16 The idea for this book originated from a Special Session on Circuits and Systems for Future Generations of Wireless Communications that was presented at the 2005 International Symposium on Circuits and Systems which was then followed by two Special Issues bearing the same title that appeared in the March and April 2008 issues of the IEEE Transactions on Circuits and Systems Part II Express Briefs Out of a large number of great contributions we have selected those fitting best the book format based on their quality We would like to thank all the authors the reviewers of the Transactions on Circuits and Systems Part II and the reviewers of the final book material for their efforts in creating this manuscript We also thank the Springer Editorial Staff for their support in putting together all the good work We hope that this book will provide you the reader with new insights into Circuits and Systems for Future Generations of Wireless Communications      *Life System Modeling and Intelligent Computing* Minrui Fei, Li Jia, George W.
