#### Detailed answers:

1.1. Use the Internet or other resources to chart the development of an energy technology, from its earliest beginnings to the present day. Did the roots of this technology first emerge prior to the start of the industrial revolution? If so, how? If not, when did the technology first emerge? In what ways did the industrial revolution accelerate the growth of the technology? More recently, what has been the impact of the information age (e.g., computers, software, electronically controlled operation, the Internet, etc.) on the technology?

- *Answer:* A variety of answers are possible. For example, for wind energy, the roots of the technology predate the industrial revolution, dating back to the middle-ages in Europe and earlier to use of wind for grinding grain in China and the Middle East. The industrial revolution made possible metallurgical techniques, which in turn enabled the precision fabrication of turbine blades, electrical components, etc., used in wind electric conversion devices. Since the 1970s, information technology has been used computationally to improve the shape of the turbine blades or operationally to integrate electricity from the turbine into the grid.
- Alternatively, for solar energy, solar energy predates the industrial revolution, in that the use of passive solar design to heat buildings or keep them cool goes back to the Ancient Greeks, the Chinese, and the Native Americans of the southwest. Also, solar drying of clothes and food has been practiced since antiquity. The industrial revolution accelerated the growth of solar energy by making possible metallurgical techniques, which in turn enabled the precision fabrication of experimental solar-powered, steam-driven devices starting in the late 1800s. They also made possible home-sized solar water heating systems for domestic hot water. Since the 1970s, information technology has been used
