Women In Mathematics:

Women in Mathematics Janet L. Beery, Sarah J. Greenwald, Jacqueline A. Jensen-Vallin, Maura B. Mast, 2017-12-02 This collection of refereed papers celebrates the contributions, achievements, and progress of female mathematicians mostly in the 20th and 21st centuries. Emerging from the themed paper session The Contributions of Women to Mathematics 100 Years and Counting at MAA's 2015 MathFest, this volume contains a diverse mix of current scholarship and exposition on women and mathematics, including biographies, histories, and cultural discussions. The multiplicity of authors also ensures a wide variety of perspectives. In inspiring and informative chapters, the authors featured in this volume reflect on the accomplishments of women in mathematics, showcasing the changes in mathematical culture that resulted as more women obtained tenure track and tenured academic positions, received prestigious awards and honors, served in leadership roles in professional societies, and became more visibly active in the mathematical community. Readers will find discussions of mathematical excellence at Girton College, Cambridge, in the late 19th and early 20th centuries; of perseverance by Polish women in mathematics during and after World War II; and by Black women in mathematics in the United States from the 1880s onward, and of the impact of outreach programs ranging from EDGE's promotion of graduate education to the Daughters of Hypatia dance performances. The volume also provides informative biographies of a variety of women from mathematics and statistics, many of them well known and others less well known, including Charlotte Angas Scott, Emmy Noether, Mina Rees, Gertrude Cox, Euphemia Lofton Haynes, Norma Hernandez, Deborah Tepper Haimo, and Teri Perl. These essays provide compelling reading for a wide audience, including mathematicians, historians of science, teachers of mathematics, and students at the high school, college, and graduate levels. Anyone interested in attracting more girls and women as students, faculty, and/or employees will also find this volume engaging and enlightening.

Women in Mathematics Claudia Henrion, 1997-01-01 Uses the profiles of nine women mathematicians to explore the nature of the participation of women in mathematical research and surrounding issues of gender and race. *Complexities* Bettye Anne Case, Anne M. Leggett, 2016-05-31 Sophie Germain taught herself mathematics by candlelight, huddled in her bedclothes. Ada Byron Lovelace anticipated aspects of general purpose digital computing by more than a century. Cora Ratto de Sadosky advanced messages of tolerance and equality while sharing her mathematical talents with generations of students. This captivating book gives voice to women mathematicians from the late eighteenth century through to the present day. It documents the complex nature of the conditions women around the world have faced and continue to face while pursuing their careers in mathematics. The stories of the three women above and those of many more appear here, each one enlightening and inspiring. The earlier parts of the book provide historical context and perspective, beginning with excursions into the lives of fifteen women born before 1920. Included are histories of collective efforts to improve women's opportunities in research mathematics. In addition, a photo essay puts a human face on the subject as it illustrates women's contributions in

professional associations More than eighty women from academe government and the private sector provide a rich range of insights and strategies for creating workable career paths while maintaining rewarding personal lives The book discusses related social and cultural issues and includes a summary of recent comparative data relating to women and men in mathematics and women from other sciences First person accounts provide explicit how tos many narratives demonstrate great determination and perseverance Talented women vividly portray their pleasure in discovering new mathematics The senior among them speak out candidly interweaving their mathematics with autobiographical detail At the beginning of a new century women at all stages of their careers share their outlooks and experiences Clear engaging and meticulously researched Complexities will inspire young women who are contemplating careers in mathematics and will speak to women in many fields of endeavor and walks of life
